Telegraphic and Cable Address—' **PRYKE LONDON.**'

Telephone Nos.—812 & 5915 Bank.

40 & 41, UPPER THAMES STREET

AND BROKEN WHARF,

LONDON, E.C.

DEAR SIR,

We have much pleasure in handing you herewith a copy of our **NEW ILLUSTRATED "TRADE" CATALOGUE**, which contains much useful information, together with illustrations of most of the up-to-date designs in Stoves, Ranges, etc. We hope it will be the means of leading to increased business between us, as we believe the Catalogue to be the most **Comprehensive** and **Useful** book in the **TRADE** for Architects, Contractors, Builders, etc.

Every care has been taken to select saleable patterns, with a due regard to quality and price, and the illustrations very fairly represent them.

We think, when liberally dealt with, Customers prefer dealing with one house to opening several accounts, and we have therefore included many articles now largely specified by Architects, and the favourable prices quoted should ensure our receiving orders for these goods.

Should occasion arise through Market Fluctuations or otherwise, we reserve the right to alter the prices **with or without notice**.

OUR NEW PREMISES, specially built for our occupation, contain ample and large **SHOW ROOMS** (with Passenger Lift) and Warehouses with River Wharf accommodation. We consider our new **SHOW ROOMS** second to none in London and we cordially invite an early inspection of them, containing as they do, exclusive and up-to-date designs of Wood, Marble and Iron Chimney Pieces, Tiled and Interior Stoves, Ranges, Kitcheners, Baths, Sanitary Goods, Stable Fittings, etc., etc.

In conclusion we would remind our friends and customers, that we continue to give **PERSONAL ATTENTION** to all departments of our business, and no effort will be wanting on our part to merit a continuance of the support hitherto so generously accorded us, and for which we are extremely obliged.

Your acknowledgment of the safe arrival of this Catalogue, together with an order, will be much appreciated.

Yours faithfully,

PRYKE & PALMER.

GENERAL CONDITIONS.

Please do not mutilate this book, as loose sheets may be had upon application.

In order to obviate correspondence and to avoid delay in the despatch of orders, customers are kindly requested to carefully note the following conditions—

PRICES.

The prices given in this Catalogue cancel all previous lists and quotations, and are subject to alteration with or without notice. When Customers quote a price on their orders, we notify them before sending the goods, should any alteration have been made in the price since the publication of the Catalogue.

ILLUSTRATIONS.

Every care has been taken to ensure accuracy in the illustrations throughout the book, but improved methods of manufacture and improvements in the design sometimes necessitate modifications.

ORDERING.

When ordering, Customers will facilitate the execution of their orders, by quoting Catalogue Numbers, Sizes, etc., and if goods are required "as before," it will assist us if date of previous invoice is given.

PACKAGES AND PACKING.

Packages are charged for and in most cases are returnable, full credit being allowed upon receipt, and in all cases Customers should advise us of the return and obtain a credit note previous to settlement. When "non"-returnable packages are sent, these are charged at cost price. The packing charges for Floor Tiling is 6d. per yard, and for Chimney Pieces, 1/- each. These charges are made up by cost of material (not returnable) and labour, and are extra to cost of packages.

CARRIAGE.

All goods priced in this Catalogue are sent Carriage Forward (except where otherwise stated), but we shall be pleased at any time to quote prices which will include delivery.

BREAKAGES AND INSURANCE.

Packed goods such as Marble, Enamelled Slate, Closets, Tiles, etc., should be signed for as "**UNEXAMINED**," and immediately unpacked. Should any breakage be discovered, notice should be given to the Station Master within twenty-four hours, and an intimation sent to us. If signature is given without remark, it is a **clear release to the carriers** from any liability in respect to the damage, and no claim whatever can be entertained in respect thereto. Cast Iron Baths, Stoves, Ranges, Furnace Pans, Cows, Earthenware Sinks, Manhole Covers, and many other goods, are now only accepted by the Railway Companies at "**OWNER'S RISK**," and in the event of loss or damage in transit, they will accept no liability, but at the request of many of our customers, we have made arrangements whereby, for the nominal premium of 2½ per cent. or 6d. in the £, we **INSURE** the goods, and in the event of loss or breakage in transit, we replace the goods **FREE** and without delay. The Insurance charge will, in all cases, be added at the foot of invoice. All goods which the Carriers only carry at "Owner's" risk will be insured, but if Customers prefer to take the risk themselves, it must be so stated on order. We may add that in most instances, the lower rate of carriage charged, will, after paying for the Insurance, show a saving over the "Companies'" Risk rate.

ACCOUNTS AND PAYMENTS.

New accounts are only opened upon receipt of a Banker's and two satisfactory London Trade references, but with all first transactions, it would be as well to send a remittance, so that delays may be avoided. Payments are due monthly and on journey. In those places where we are not represented, a monthly statement is rendered, and payment is due on the 10th of the month following.

DISCOUNT.

Customers paying **CASH WITH ORDER** are allowed the following special discounts:—

Orders exceeding	£2 and not exceeding	£10	5 per cent.
"	"	£10	"	"	6½ "
"	"	£25	"	"	7½ "
"	"	£50	"	"	10 "
"	"	£100	"	"	"

These discounts do not apply to "Special" Quotations or Contracts, and it must be clearly understood that they are only allowed for **Cash with Order**, and no exception can be made.

DEDUCTIONS.

Errors and Omissions must be at once taken up with us on receipt of invoice, and a credit note obtained previous to settlement, as otherwise no deduction can be allowed.

TELEGRAPHIC AND CABLE ADDRESS.

"**PRYKE LONDON.**"

If with Copper Pillars and Mounts instead of Brass, 9/- extra.

The "Sandringham" Register Tiled Stoves.

OVER 40,000 IN USE.

No. 9297.

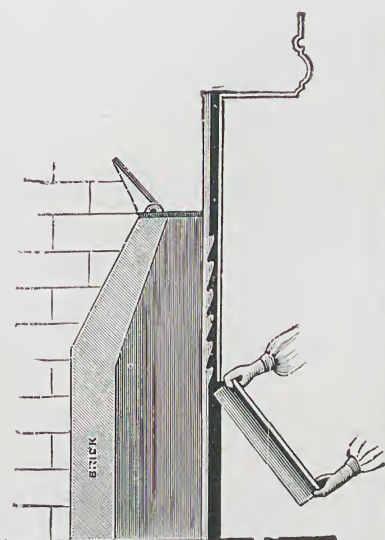

ADVANTAGES.

Economy of Fuel.

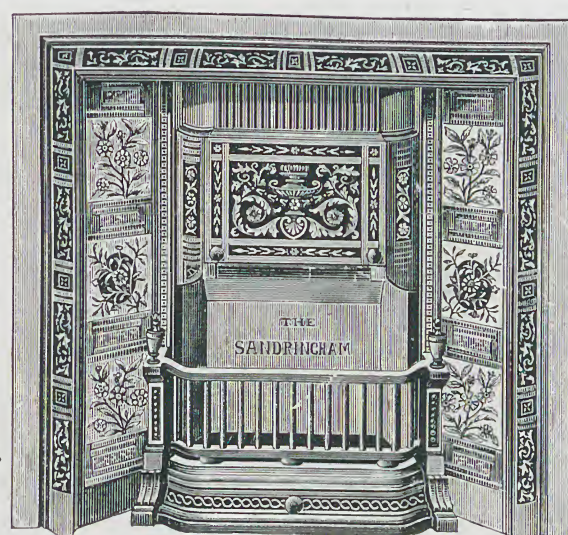

A bright fire immediately obtainable.

Free access to the chimney for fixing and sweeping.

Consumption of smoke and deleterious gases.

SECTION SHOWING METHOD OF REMOVING CANOPIES.

SECTION SHOWING BOTH CANOPIES IN POSITION.

ADVANTAGES.

Perfect cure for smoky chimney.

Easy regulation of the draught.

Controlled or perfect combustion.

Greatly increased heating power.

THIS Grate is provided with two Canopies, one in front of the other. The front Canopy works upon a rack (cast on to the front), and stops at any point, enabling a bright cheerful fire to be immediately produced, or the draught regulated at will. The advantage of this arrangement is obvious, as a sluggish draught can be at once quickened, or a nearly extinguished fire revived, by merely lowering the front Canopy to the desired point. Both Canopies are easily removeable, leaving an open space over the brick, through which the back of the fire can be built up *with the Grate in position*, and the chimney more easily and effectually swept, than in grates of other construction. The back and sides of the fire are entirely of fire brick of an improved form, by which the maximum of heat is deflected into the room, and also the greater portion of the smoke as well as the noxious gases generated by combustion, arrested and consumed; thus not only increasing the heating power of the Grate, but preventing the vitiation of the atmosphere.

40 and 41, UPPER THAMES STREET, LONDON, E.C.

No. 9320.

The "Municipal" Combined Heating and Cooking Stove.

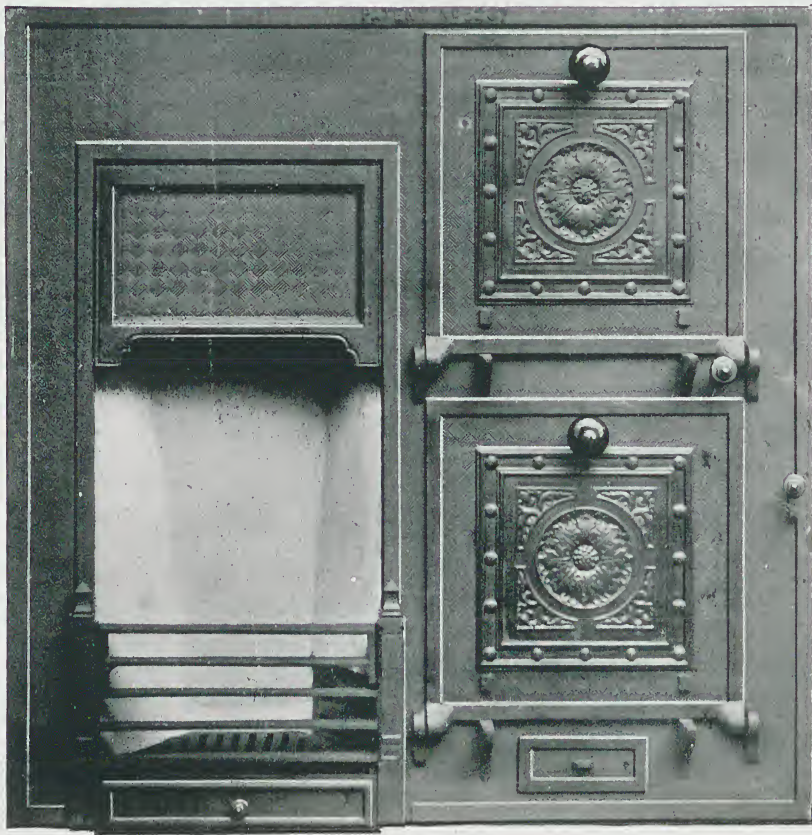

Illustration shows Oven and Hot Closet Closed.

This combined Heating and Cooking Stove has been designed specially for Model Dwellings and Flats, where it is of advantage to use the Heating apparatus for cooking also, and we would draw special notice to the following facts.

It is a Heating Stove on the most modern lines. No better on the market. It is a Cooking Stove, equal or better than any other made, the oven being heated by radiation as well as by direct draught, one fire answers both purposes, and the oven is always ready for use. It is self-setting, no flues requiring to be built by the setter; it cures down draught. The Hot Plates can be fitted with Gas Rings, thereby making it a combined coal and gas cooker. It is also of good appearance and an economiser of fuel. It is adapted to the size of any ordinary sitting room mantel piece.

Made in one size, 38 ins. × 38 ins., with Solid Fire Brick Back, Stool Bottom Grate, Adjustable Canopy, fall bar to fire, bottom heat to oven, with regulating damper, Self Contained Flues. Oven and Hot Closet are made of stout sheet iron, and measure 14 ins. × 14 ins. × 14 ins. inside. Fire 13 ins. wide.

The Stove can be supplied with Oven and Hot Closet either side of fire, and Hot Closet Door hung at side to open outwards, but is sent out as drawing unless ordered otherwise.

Can be fitted with high-pressure Boiler if desired.

Prices on application.

Illustration shows Oven and Hot Closet Open.

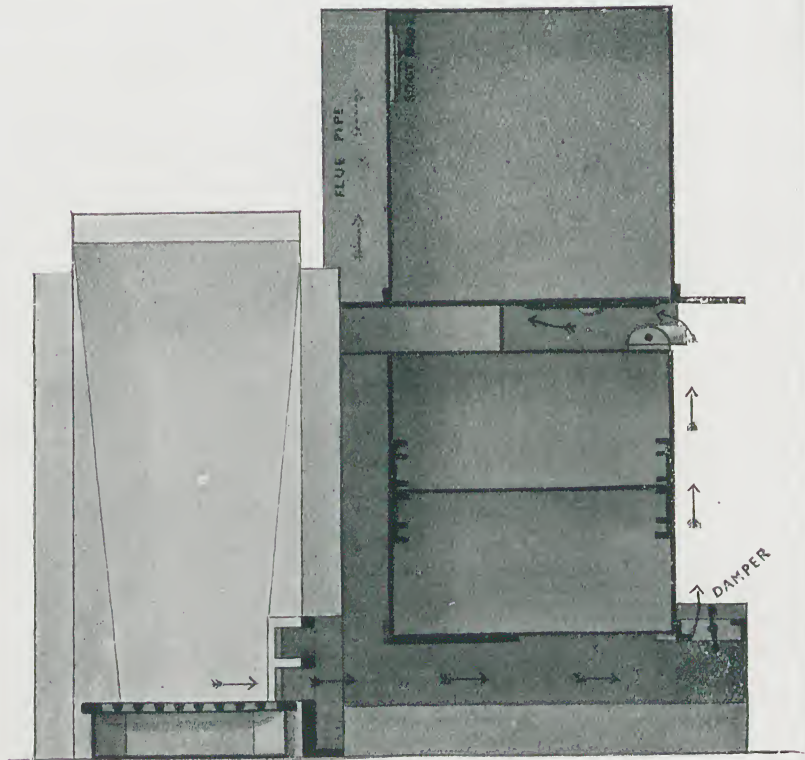

Illustration shows direction of Flues.

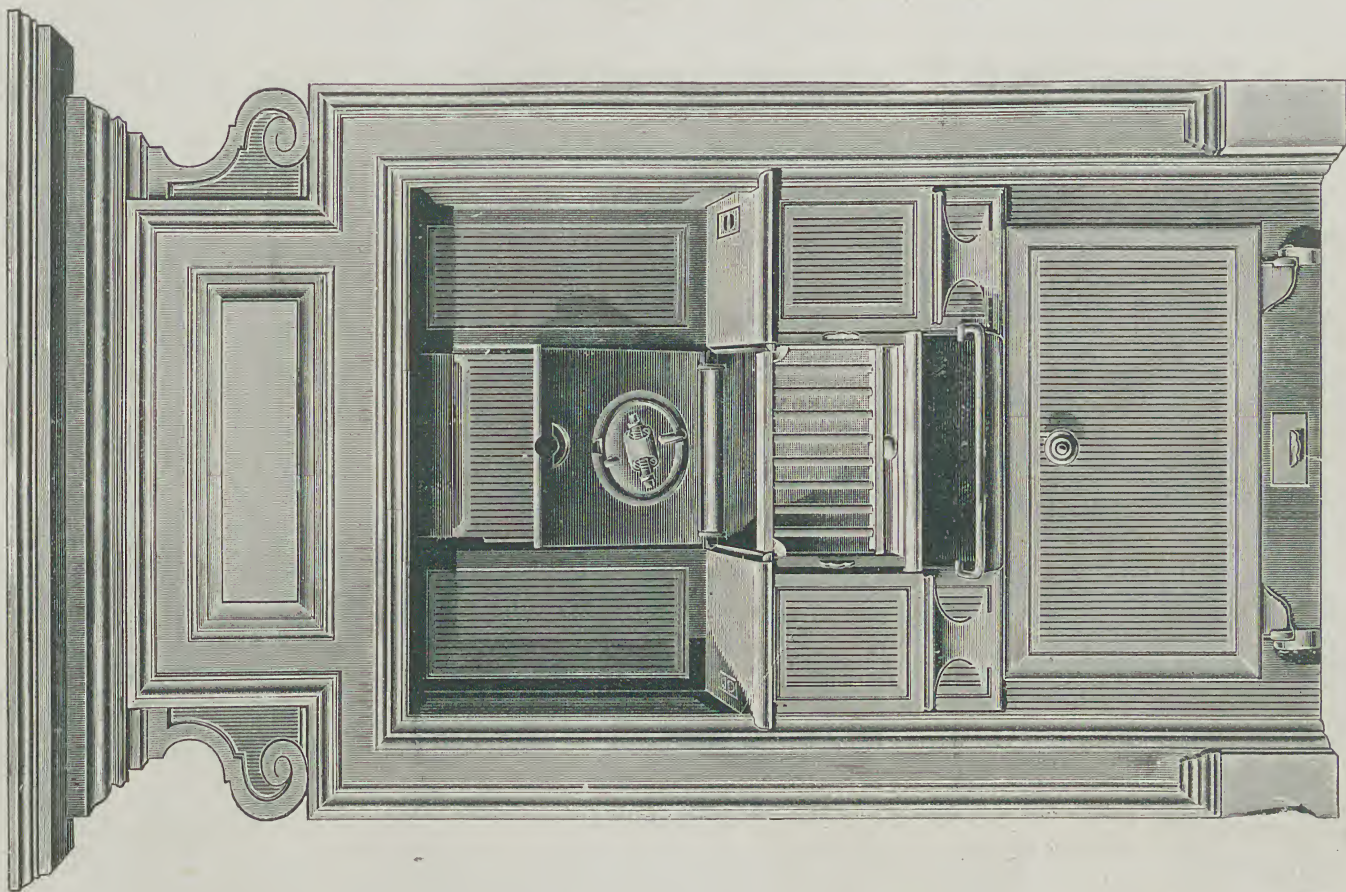

Price—Fine Cast 100/-

12 in. Fire, same price, 16 in. Fire, extra.

The above can be fitted with vertical or horizontal nozzles, instead of the usual square opening at back.

The "Narcissus" Stove.

These Grates warm by two methods, viz., by Radiant Heat and Convected Heat (or heating by warm air). They are the most perfect Slow Combustion Ventilating Grates in the market, and the speed of combustion is under complete control. The circulation of air from the side chambers is so rapid that the outer plates never get superheated, consequently the air is never vitiated, while the apartment is uniformly heated in all parts.

SPECIAL FEATURES.—Great Economy of Fuel.—Perfect Combustion.—Cheerfulness and Cleanliness.—Burns Cheapest Fuel.—Ease of Lighting and Ease of Restoration of an almost extinguished fire.—Elegant Appearance when not in use, as well as with fire in action.

New "Welsbach Kern" Gas Radiators.

Those having Friezes are arranged for Boiling. Those having Hoods, have them fitted with baffle plates, which radiate a large amount of heat.

No. 0B, with Frieze, has five small Tubes.

No. 1B, with Hood, has ten small Tubes, five of which may be used, or ten, at pleasure.

No. 2B, with Frieze, has five large tubes.

The above constitute a great advance in the utilisation of gas for heating purposes, and are constructed upon the principle embodied in the well-known "Kern" lighting burner, *i.e.*, mixture with the gas of the amount of air sufficient to ensure complete combustion; the mixture of air and gas burns in a perforated clay tube, and the heat so generated is projected into the room by radiation.

										Price, in Art Black.

Standard Boiling Burners.

No. 9722, 9723 and 9724 Standard.

No.	Prices.	Prices with taps	Prices. Porcelain Enamelled.	Diameter across support for vessels.
No. 9722	2/-	3/-	3/-	5½ ins.
„ 9723	2/9	3/10	4/-	7 „
„ 9724	4/-	5/-	6/-	8 „
„ 9725	9/-	10/-	12/-	10 „
„ 9726	10/-	11/6	14/6	10½ „
„ 9727	13/6	18/6	—	11 „

These burners are now universally accepted as the most perfect, simplest, and most economical burners ever constructed.

Cheap Standard Burners.

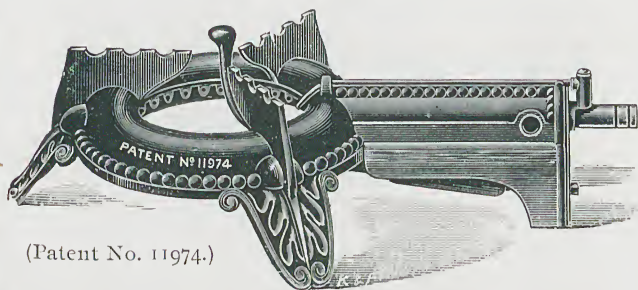

New Series, Design and Form. Registered.

No.	Quarts of Water boiled per hour in a light broad-bottomed vessel	Diameter across support for vessels.	Prices
No. 9718	12	4½ ins.	1/9
„ 9719	15	5½ „	2/-
„ 9720	20	6 „	2/3

These, like all our burners, are as perfect in every detail as can possibly be made, the *only* difference is that the casting is made in a simpler way, and the support for vessels is not so broad, requiring more care when large pans are used. All our burners are equally perfect; we make no second or inferior quality.

The difference between these and the cheap burners commonly sold will be appreciated when burning, by the appearance of the flame, and by the *smell* of the common make when used.

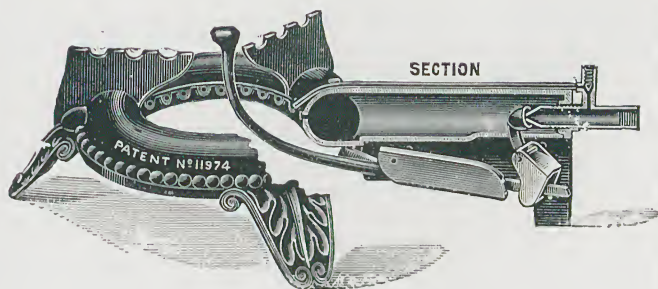

No. 9728. The Automatic "Gas Saver."

(Patent No. 11974.)

This is an exceedingly popular form of our Automatic Gas-Saving Appliances, and has a steadily increasing sale. Outside diameter of ring, 6 ins. Size over feet, 8½ ins. Length of tail, 5 ins.

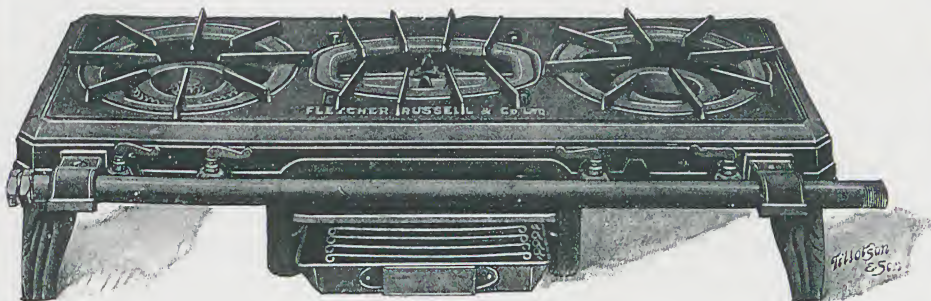

Price—6/3 each.

When Vessel is taken from Stove the Automatic Appliance immediately acts and forms bye-pass, thus avoiding the common habit of leaving the Gas to burn to waste.

CANNOT POSSIBLY GET OUT OF ORDER.

"Colonial" Grill and Hot Plate.

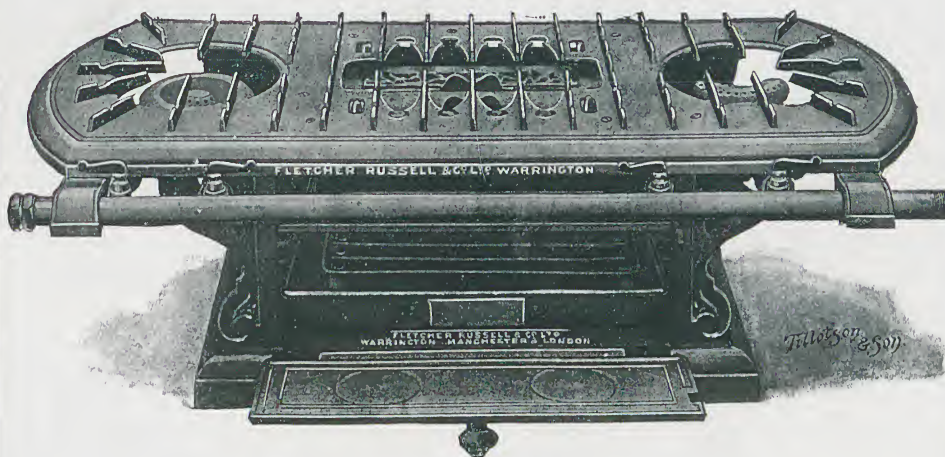

This is similar to the well-known Colonial Hot Plates, but has a combined toaster, grill, and boiling burner in the centre.

The stock pattern has wrought-iron supply pipe, one double concentric and one single burner, in addition to the grill, if with two double concentric burners, and with strong polished brass supply pipe. 9/- extra.

"Colonial" Grill, No. 9721. Price, 31/6.

Size 27½ ins. long, 13 ins. deep, 6¼ ins. high.

No. 9729. "Malta" Grill and Hot Plate.

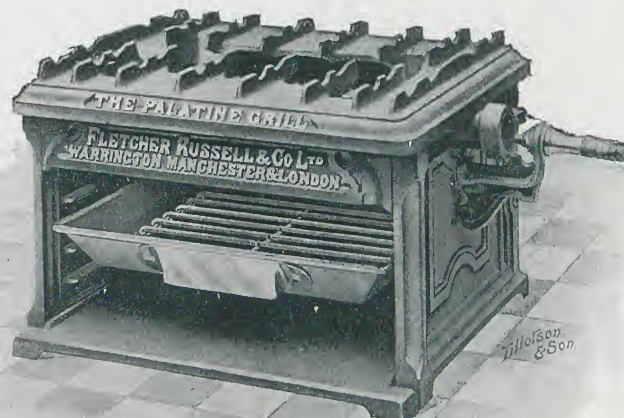

This is an enlarged and improved pattern similar to the well-known No. 9721 "Colonial" Grill. The grill space is 12 ins. X 10 ins. X 5 ins. high. Size overall, 30 ins. X 14 ins. X 9 ins. high. The price includes toasting plate, grill tin and grid. The falling door in front will be found a great advantage. One of the boiling burners is fitted with a special simmering burner, and the whole apparatus will be found first-rate in every respect.

Price, 36/6

This pattern can be supplied with the grill space 7 ins. high at an extra cost of 1/8

"Palatine" Griller.

The newest and most modern Griller on the market.

Requires ¾-in. bore gas supply. Fitted with reversible burner.

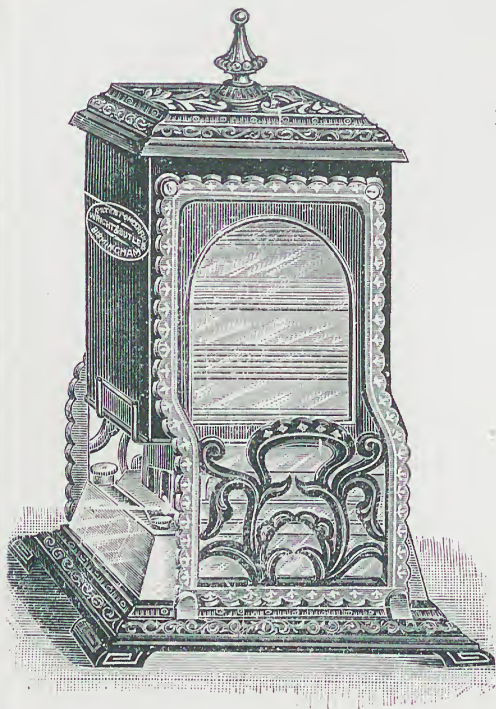

Sizes—Outside, 14 ins. wide, 9 ins. deep, 7 ins. high; clear inside grilling space, 9½ ins. wide 7½ ins. deep, 5½ ins. high.

Price—Without Loose Cast Base Plate, 8/9

Loose Cast Base Plate, as engraved, 1/3 extra.

Celebrated English Made Oil Warming Stoves.

EVERY STOVE GUARANTEED.

No. 9786.

DIMENSIONS: Length, 14 ins.; Width, 11 ins.; Handle 24 ins. Long.

One cwt. of coke can be broken small in 20 minutes by a lad 14 or 15 years old.

Price 22/- each. On Iron Stand 30/- each.

No. 9787.

Cast Iron Stand Pipes.

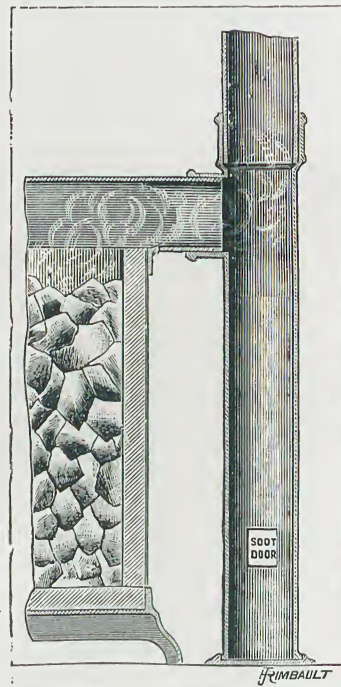

For supporting Smoke Pipes for "Tortoise" and other Hot-air Stoves.

ADVANTAGES:

Avoidance of an Elbow.

Facility for cleaning out stove pipe. Also, if required, for driving damp air out of pipe by lighting shavings in soot door.

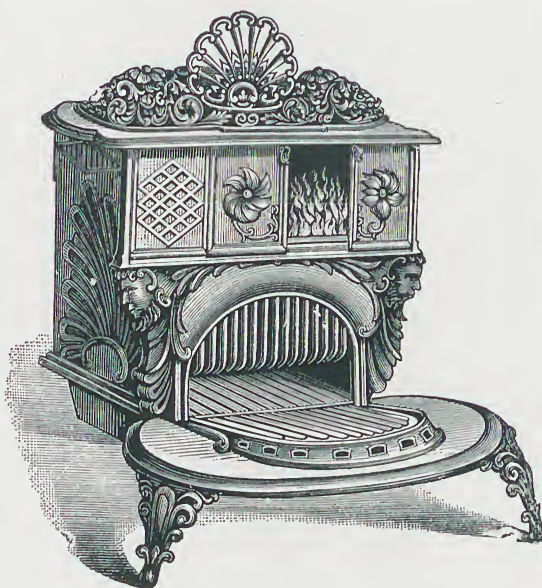

Forms a solid foundation for supporting vertical lengths of pipe independent of stove, which can at any time be removed for repairs, &c., without disturbing the pipes.

The "Don" Improved Slow Combustion Stove.

Entirely
lined with
Bricks.

No Sheet
Iron Casing
to burn away.

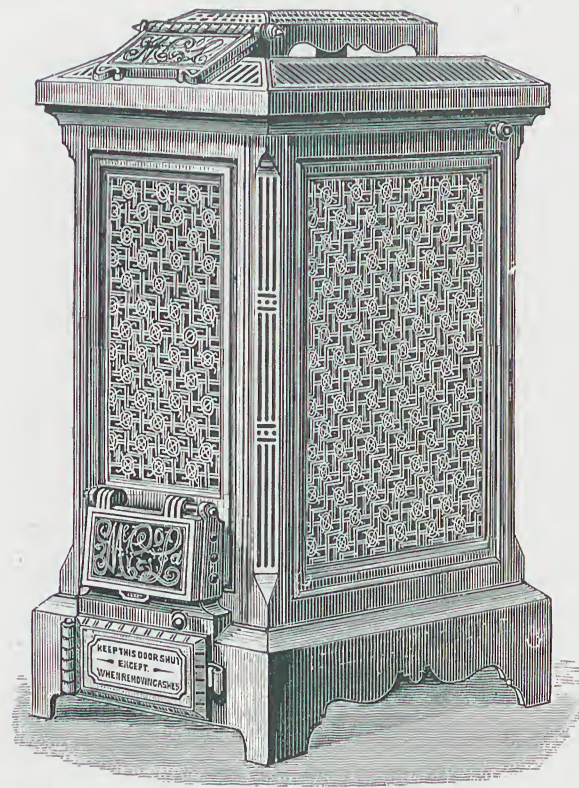

These Stoves are made with Ornamental Cast Iron Casing of chaste design, with bold Cap and Base, and are lined throughout with Fire Brick, the Fire does not come in contact with the iron parts at all; they are powerful Heating Stoves and very durable. The fire is fed through Fall-door at top and the draught regulated by Sliding Door at bottom.

Finished in ordinary Black, also Berlin Black.

No. 9810. Hospital Stove.

WITH HOT AIR CHAMBER INSIDE & TWO FIRES.

Hospital Stove, with Fire at each end, made on the most up-to-date system, with three large Tile Panels on each side and Tile Panel over each fire as shown, the Tiles being held in place where required by Brass Studs. The whole got up in *dead black*.

The Top can be easily removed in order to clean the air flues and all other parts of the inside.

Fresh Air is brought from the outside and delivered through large holes in the Stand Plate, where it is warmed and passed out through the grating in the Top of the Stove.

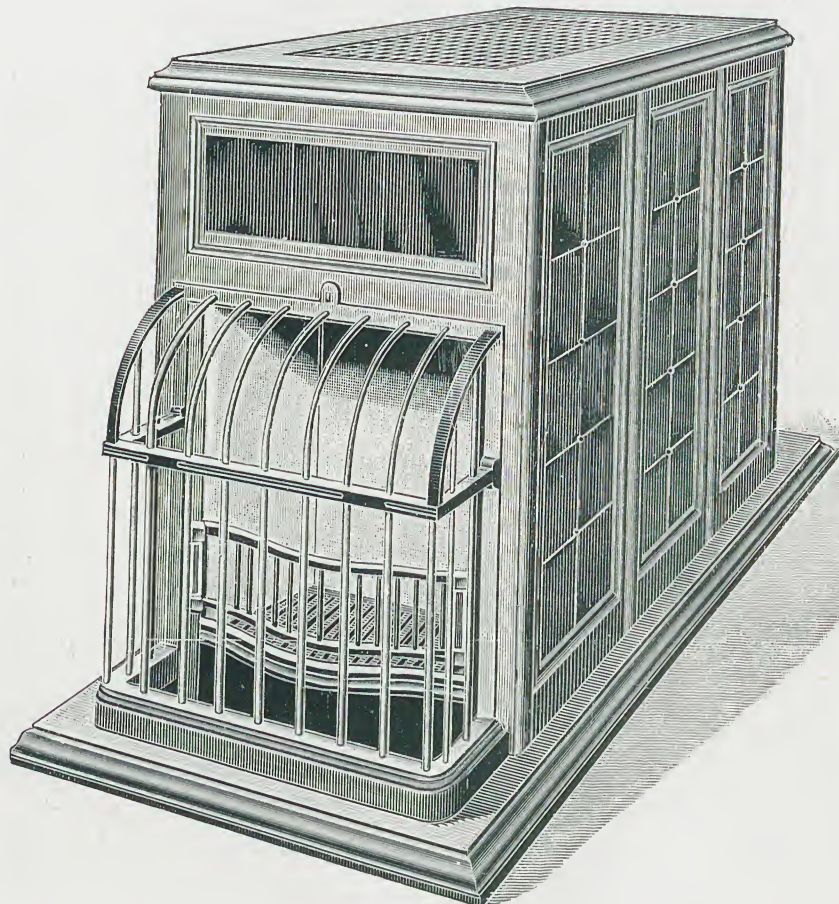

The Drawing shows the Stove made with Descending Flues, which are taken out through the Stand Plate and do not show in the room where it is fixed. There is a Soot Door at the top of each Flue, so that it can be inspected and, when necessary, swept.

Each Fire is lined at both Back and Sides with strong Fire Bricks, and has a Wrought Iron Cage in front attached to the Curb and arranged so that it can be fastened by a padlock at the top and unauthorised persons cannot get at the fire. The upper part of this Cage is hinged so that it can be easily thrown open when fuel is required to replenish the fire.

This arrangement is more especially designed for use in Lunatic Asylums and other similar institutions, but can be dispensed with if desired to reduce the cost.

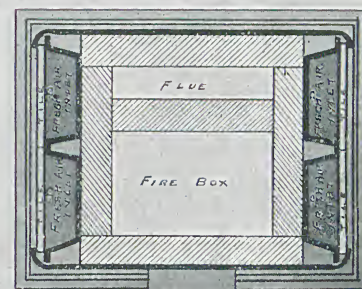

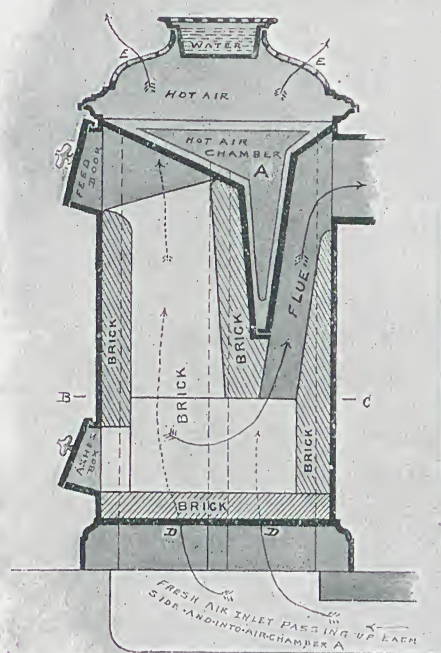

Price—Hospital Stove, as above described, with Tiles,
Stand Plate, Wrought Iron Cages, complete £39 0 0
Ditto, without Cages 31 0 0

NOTE.—As we can also make the above in a great variety of ways, in order to suit our customers' requirements we shall be always happy to meet their views, and to quote special prices accordingly.

No. 9811.

Tiled Air Stove.

The fresh air passes in Chambers D and circulates thro chamber A (over fire) then passing out thro E, E.

Size .. 23½ × 18 × 36 ins.

Constructed on the Slow Combustion Base Burning Principle as illustrated on the Sectional Drawings. Ventilation Flues on each side of Stove.

Heating Capacity, 20,000 cubic feet.

Price—Berlin Black, Best Finish
 „ Fine Cast and Blacked

No. 9812.

Double Down Draught Faience Stove.

SUITABLE FOR HOSPITALS AND PUBLIC INSTITUTIONS.

NOTE—PRICE INCLUDES FIXING.

This Stove is specially suitable for Hospitals, Workhouses, Banks, or large rooms of any description, owing to its cleanliness, power of storing heat and gradual radiation, maintaining an equal temperature in the room day and night. Fresh air is introduced, warmed and expelled into the room again without coming into contact with the Fire, thus keeping the air free from dust and noxious gases.

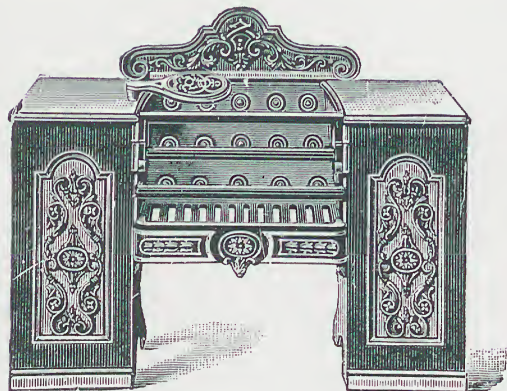

Price—With Ironwork and all Fittings
 above ground, fixed complete
 in London or equal distance
 from Works £60 0 0

This Stove is also made with Single Down Draught
 and Single Fire for Smaller Rooms.

Price £43 10 0

No. 9827. The "Welcome" Range.

SPECIAL ADVANTAGES.

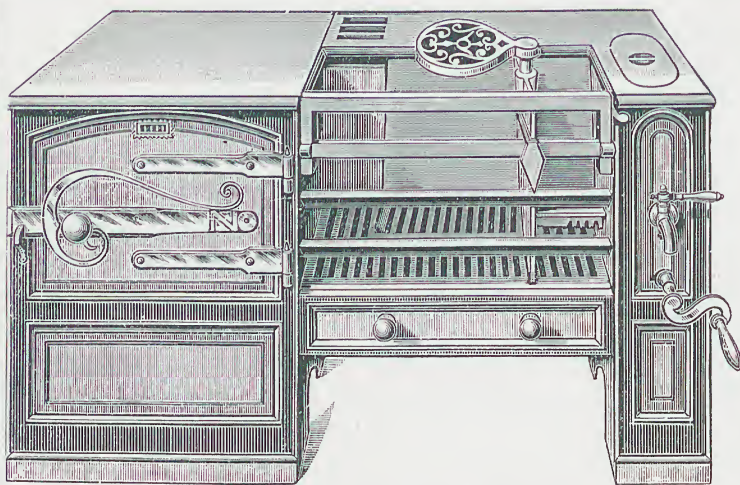

Has a large Oven with a Double Case, which prevents it being wrongly fixed. It can therefore be relied on to bake thoroughly well. Has a small Fire with a Fire Brick Back, which gives more heat, makes less smoke, and saves a considerable quantity of fuel.

The Brick Back can at any time be renewed at the cost of a Shilling.

Has a large Boiler and extra deep fall Bar. Has no Flues and costs little to fix.

No. 9835. Oven Grate.

11 IN. OVEN.

WITH PATENT CRANE AND OVEN HINGE.

A special feature of this Grate is our new Patent Crane, which dispenses with the ugly Wrought-iron Crane. It is fixed over the centre of the fire, and will swing over either hob, and when at right angles with the back will slide back into the chimney, thus acting as a pole. It is always out of the way of pots, and at the same time is ready for use. Our Oven is made in separate plates to avoid cracking, and with a Patent Cast-iron Hinge which works more freely than the usual Wrought-iron one.

New "President" Stove.

FOR COAL, WOOD, OR TURF FUEL.

An extra strong and heavy Stove with Bold Mouldings overlapping the body and making a very wide Hot-plate.

A Special Feature is the extra large Oven to every size.

This Stove is fitted with a Sheet Iron Ash-pan with Cast Front, Sliding (not lift off) Soot Door in front, Damper to give direct draft for quick kindling, or circuitous draft to heat Oven and Hot-plate, Excellent set of first-class Cooking Utensils, and so many Attractive, Original and Modern Improvements that the "PRESIDENT" is bound to take a leading position in the Stove Trade wherever introduced.

THE SET OF COOKING UTENSILS CONSISTS OF

- 1 Copper Water Boiler, with Brass Tap, fits either Front or Back opening on Hot-plate.
- 1 Iron Tea Kettle.
- 1 Iron Pot (Tinned Inside) with Cover.
- 1 Vegetable Steamer to fit the Pot.
- 1 Columbian Goblet and Cover.

- 1 Stew Pan and Cover.
- 1 Round Frying Pan.
- 1 Round Gridiron.
- 1 Set (3) Baking or Roasting Pans for Oven.
- 1 Poker, Flue Brush and Rake for Flues, Shovel, and Handle for lifting Stove Covers, &c.

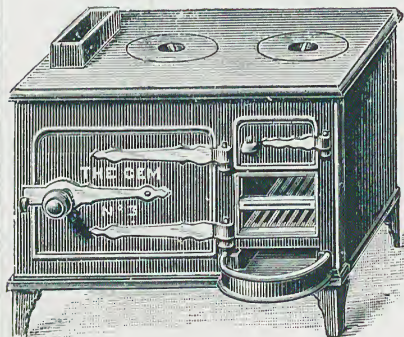

If so desired, our Special Quality Blue and White Enamelled Tea Kettle, Boiling Pot, Goblet, and Stew Pan can be sent in place of the Iron ones, without extra cost.

Wrought Iron High-pressure Back Boiler fitted from

50/- to 60/- each Range extra.

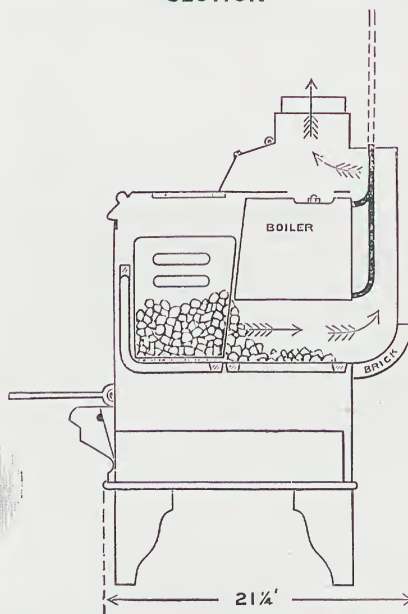

No. 9848.

The "Camelot" Portable Range with Wrought Pressure Boiler.

MADE OVEN LEFT ONLY.

SECTION

Fitted with Wrought Pressure Boiler and two 1-in. Wrought Iron Connectors, brought out at back of Hood ready for connection by the plumber. There being separate Flues to both Oven and Boiler; thorough efficiency in working is obtained. Easy access to manhole can be obtained by withdrawing the Screws which hold the hood in position, the Hood is then removeable, and the manhole laid bare.

The pipes being led up and down at the back of Boiler, the Range will suit with water supply on either hand of fire place.

One Damper for Boiler and one for Oven control the whole working of the Stove. There is nothing to get out of order. The Boiler will be found large as compared with any similar stove.

Guaranteed to give satisfaction.

Sizes .. 30 33 36 42 ins. wide.

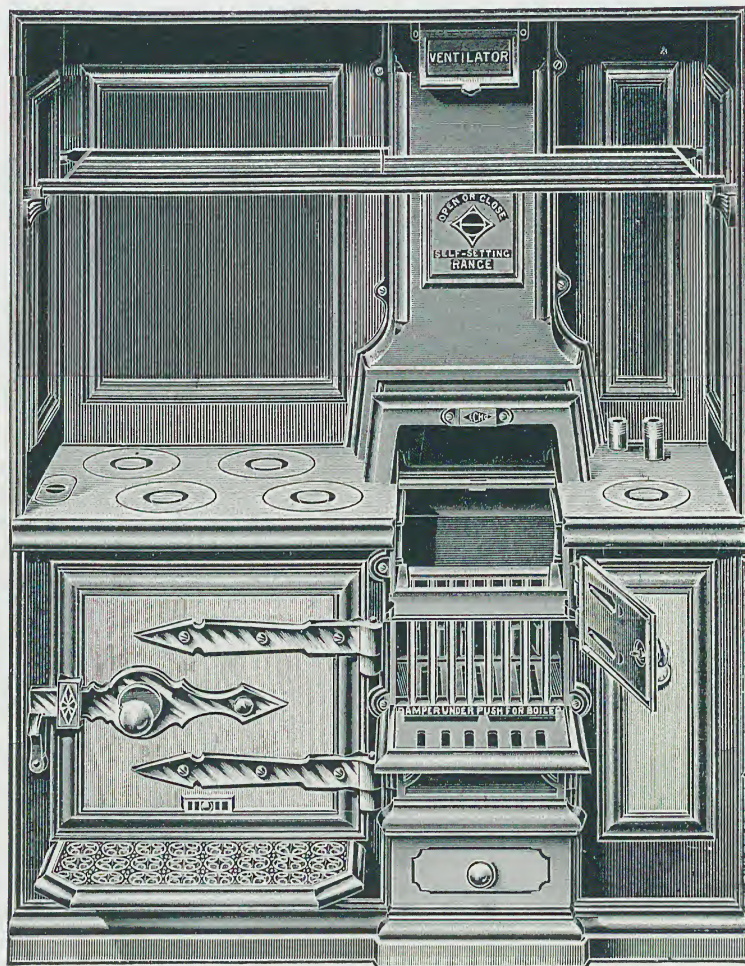

Ovens .. 15 15 15 17 ins.

Prices—100/- 102/6 105/- 120/-

With Boiler as drawn.

No. 9849.

The "Byron" Self-Setting High Pressure Boiler Range.

WITH COVINGS AND
PLATE RACK.

The Boiler has two 1-in. Wrought Galvanized Pipes fitted to it which are brought up through Hob as shown, and allow the flow and return Pipes to be attached with ease, and the minimum of trouble.

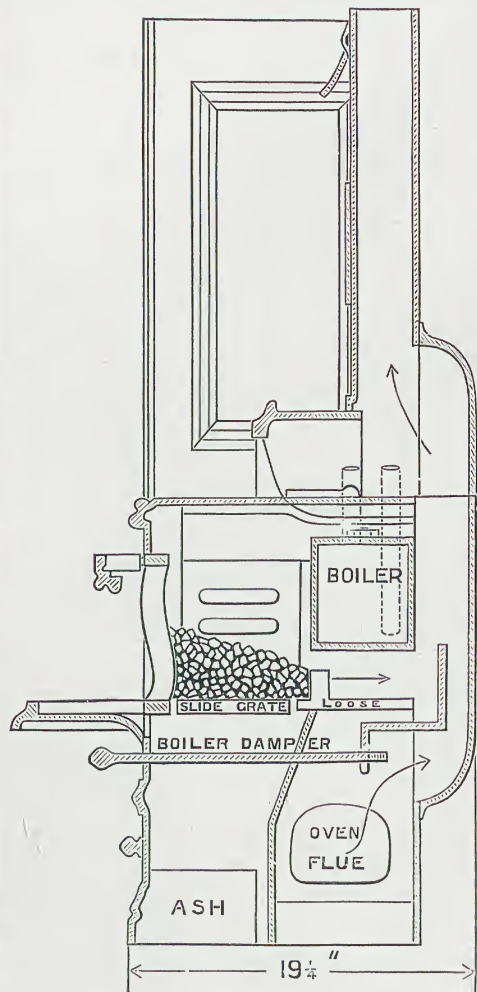

Supplied with Sheet Iron Covering in Plate for Chimney, Polished Dish Rest to front of Oven, Polished Bracket Shelf, and Blower to front of Fire, and Bright Mouldings, Knobs, &c.

Ovens either hand.

Hobs, 15 ins. deep, 25 ins. high.

Covings, 27 ins. high.

Can be supplied with Skirtings instead of Covings.

PRICES ON APPLICATION.

- ADVANTAGES.—
1. It is entirely Self-setting and requires no building whatever.
 2. Oven is heated by the WASTE HEAT from Bath Boiler at back of Fire.
 3. The Open and Close Arrangement is the simplest of any Range in the market, only requiring one motion to open or close.
 4. It is a perfect Bread Baker and Roaster, either with Close Fire or OPEN FIRE.
 5. ECONOMY IN FUEL. This is obtained through construction of Fire.
 6. QUICKER HOT WATER. This is obtained through the Boiler being placed in a Fire Brick Chamber, and its entire surface being exposed to the action of the flame (without extra cost of Boiler).
 7. Improved Plate Warming Rack obtained by utilising top of Oven, which will thoroughly heat a few dozen plates in a few minutes.
 8. Owing to the special construction of the Fire a Coal Bunker is provided underneath.
 9. A 36-in. Range can be fitted with two 14-in. Ovens and a 10-in. Fire, and the larger sizes fitted with four Ovens if required.

No. 9865.

No. 9867. The "Palace" Kitchen.

Fronts, 28 ins. high, but can be made 30 ins. at an extra cost.

Covings, 30 ins. high, but can be had up to 36 ins. at an extra cost.

Ovens, of sheet steel with cast tops, ventilated at top and bottom, and extending to almost the full depth of Hot-plate

Hobs. A heavy O.G. Moulding to the Hot-plate gives a bold and striking appearance to the Range. Hobs ground smooth all over, are made 20 ins. deep, clear, and $\frac{3}{8}$ in. thick all through. Can be made thicker at an extra cost.

Fire. The "Eagle" Fire is of the latest type, with bright edge, curved bars, and bottom is arranged to drop through.

Plate Rack. All bright and best polished, with bright O.G. moulded edge.

Dampers are all fitted with long rods and bright steel knobs.

Cups and Rings are with fire cover made extra heavy, being of $\frac{3}{4}$ in. metal on all Ranges.

Backstrap. An improved Backstrap has been adopted; it is double with a loose self-adjusting top, and allows of easy access to H.P. boiler.

Fittings. All hinges are fitted on. The oven rests are plain and highly polished, and are much cleaner than the ordinary perforated pattern. The roof plate is fitted with a wrought iron bearing bar with bright beading on all ranges.

Each Range is complete with hit and miss ventilator, ash pit linings, cinder sifter, fire tools, brick cheeks, etc.

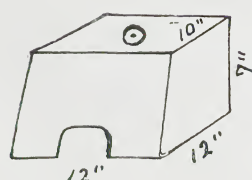

We can thoroughly recommend this Range as being **Exceptional Value**.

	42	48	54	60	66	72	ins. wide.
Prices —as drawn	223/-	235/-	249/-	273/-	298/-	328/-	
Prices —without "Eagle" and with close fire only ..	195/-	207/-	221/-	245/-	270/-	300/-	
Tiled Covings extra per range	52/-	62/-	72/-	78/-	84/-	90/-	

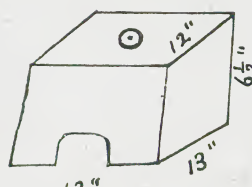

Extras to all Sizes.—Reversing Flue, 15/-; Cone Ventilators, 4/6; Covings, over 30 ins. high, 3/- per in.; 30 in. Fronts, 20/-; 5 in. Jamb Mouldings, 30/-; Round Corners only, 10/-; Hot-plate, over 20 ins. deep, 8/- per in.; Hot-plate, $\frac{3}{8}$ in. thick, 15/-; Thermometers to ovens, 10/- each.

Note.—The Size and Shape of the High-pressure Boiler is important; we therefore give below the sizes, with arch flue, best suited to this Range in 48 to 54 in., with 10 in. fires; for 8 or 12 in. fires the width only is altered.

NEW PATENT "TRIDENT" RANGE.

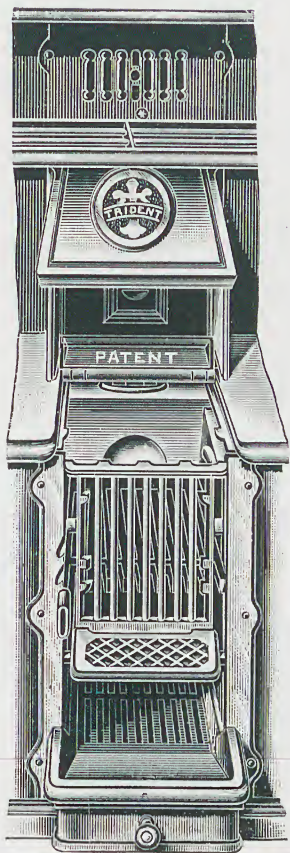

FIGURE 1.
ROASTING FIRE.

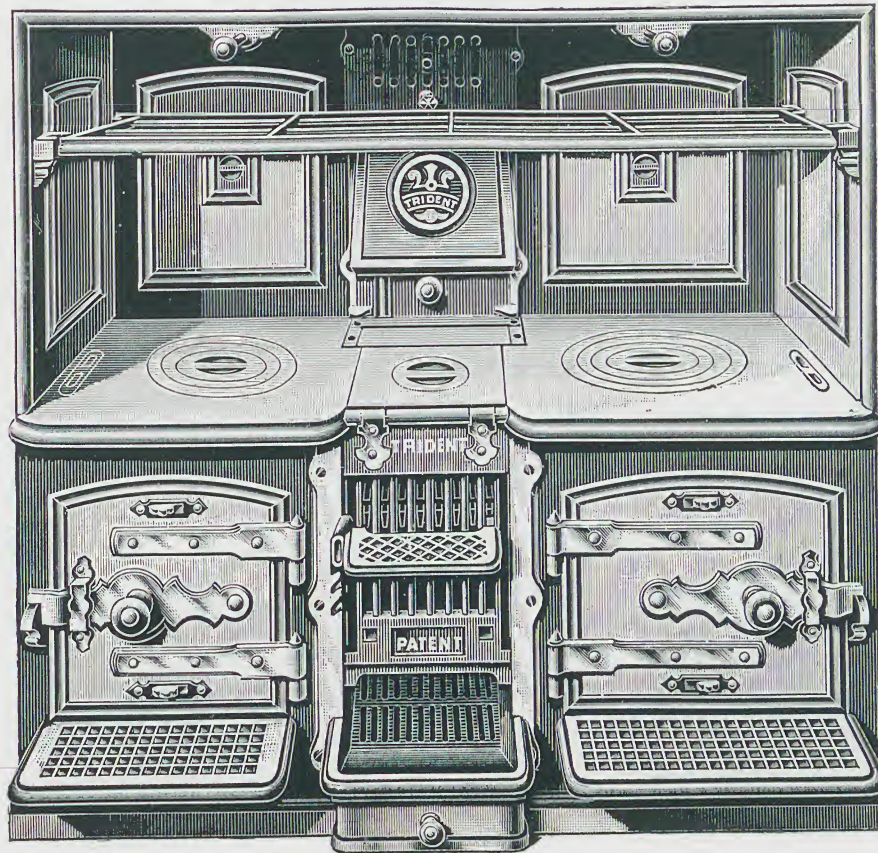

FIGURE 2.
OPEN FIRE.

The "**Trident**" Range combines the **Greatest Economy** with **Perfect Efficiency** and **Simplicity**, every detail in construction having been studied with the greatest care. **The Front Bars** slide in grooves in the side frames, in most positions resting on the Bottom Bars and moving with it, but are unattached and can be raised independent of the Bottom, and sustained in position by Pockets in the slides. They also lift entirely out with perfect ease, leaving the whole interior of Fire quite open for cleaning and giving free access to Back Boiler Flue. **The Fire Door** is attached to the **Sliding Fire Cover**, and when cooking is over and an Open Fire desired, turns on to, and is pushed back with, the Sliding Cover, leaving the whole front and Top of Fire quite clear and fully exposed, making an excellent Open Fire, pleasant for Servants to sit by and unequalled for Drying and Airing Clothes, &c. The Open Fire may be made either deep or shallow, with the Front Bars high or low, giving large or small Fire as desired. **The Open and Close Fire Hood** is opened and closed in **One Movement and with One Hand**. A **Special Boiler Damper and Dividing Plate** is sent with all Double Oven, or Oven and Sham Ranges (but not with Oven and Side Boiler Ranges), and these are, by a Patented Arrangement, attached to the Centre Cove in such a manner that the whole can be taken out without disturbing any other part of Range, thus giving full access to Boiler and Pipes. A **Perfect Cooker, Very Economical**, and by far the **Most Cheerful Open Fire** made.

The Ovens have Combined Top and Bottom Draught, and are Equally Good for Roasting or Baking.

SIZES AND PRICES:—For Brick Flues.

A Self-setting Range of moderate price, has long been wanted. The "LONSDALE" is very moderate in price and is entirely self-setting, **No Brickwork Flues are required**, and therefore the efficiency of the Range cannot be impaired through being fixed by incompetent workmen. The Flues are the proper shape and size for the Range, they are easily cleaned, and there is nothing to get out of order.

The Cabinet Bath Room.

A Commodious Bath in one's own Bedroom for one's sole use. Operated as easily as Drawing up the Blinds. A great boon for Flats and Apartment Houses. Inexpensive and Attractive. Occupies little space.

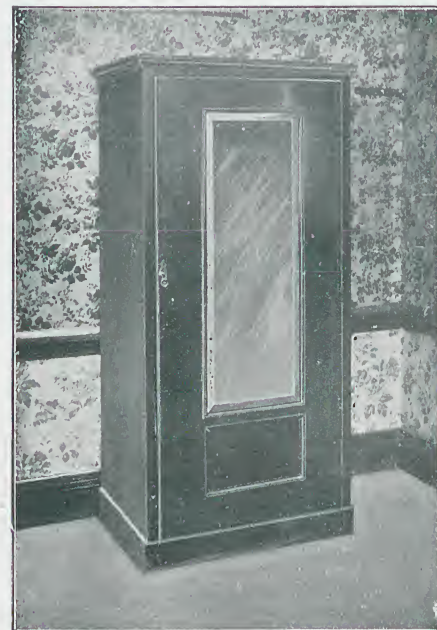

CORNER CABINET

The Cabinet is arranged to contain Bath Mat, Bath Towels, Bath Gown, Sponges, Soaps and other Bath Requisites.

The Woodwork can be made to Match any other in the same Room.

The Baths can be supplied with a Fixed Washstand, with Water and Waste Attachments laid on from 60/- extra.

WALL CABINET.

WALL AND CORNER CABINETS ARE SAME PRICE.

With Door Open Showing Bath Turned Up.

The Baths are made of the very best Steel, Lead Coated.

A large Overflow and Waste Chamber is constructed as part of the Bath, and a very efficient Trap is provided, which protects both the Waste and the Overflow.

The Cabinet Bath Room measures only 2 ft. 9 ins. wide, 2 ft. 1 in. deep, and 6 ft. 6 ins. high.

Perfectly Trapped.

It is so Well Balanced that it can be Lifted with One Finger by a Young Girl.

A Full Size Plunge Bath, 5 ft. 6 ins. long. Hot and Cold Water Connection complete. Perfect Waste and Overflow Fittings. The Bath is specially Counterpoised so as to be easily lifted into position, and when closed provides a Safety Sink to take away any Water which may be left in the Bath or drip from the Taps.

No. 838. The Cabinet Bath, coloured Sea Green inside and Dark Green outside, with Hot and Cold Water Valves, Sponge, Soap and Brush Tray, Towel Rails, Gown Hooks, Waste and Overflow Connections, and Ready for Plumber to Connect; complete with Whitewood Cabinet, Painted and Grained Oak, Mahogany or Walnut Outside, and Cream or Sea Green Inside.

Geysers and Water Heaters.

No. 849.

The "Lightning" Geyser.

(Patented and Registered.)

Made entirely of Stout Hardened Copper, with Patent Safety Dual Tap and Vent Pipe, and Swing-out Burner.

EXPLANATION OF DRAWING.

The cold water from Cistern or Main enters at the Union A, and the gas at the Union B. In passing through the "Dual" Valve C the water admits of a full supply of gas to the Burner D. If the water is either shut off by the Tap E, or the supply fails from any other cause, the supply of gas is instantly discontinued entirely, or else reduced to a harmless quantity. After passing the Valve, and admitting gas to the Burner, the water flows through the various chambers in the Geyser, absorbing almost the whole heat from the flame, and issues at the Spout F at the temperature required, from tepid to boiling, according to the thickness of the stream. A Gas Tap G is always added, and may be used as a regulator, or to shut off the supply of gas entirely, if only cold water is wanted. If the Taps are required on the other side of the Geyser, they can be unscrewed and fixed to the Union H, which is placed there for the special purpose.

J K is a Moveable Cap, it is fitted with a Socket L; through this Socket the products of combustion issue, and may be carried by means of a pipe through the ceiling into a loft, or out into the open air, or into a chimney. Union M carries away condensation drip and is for connection to Waste Pipe.

No.	Hot Water at the rate of per minute.	Hot Bath in Summer in	Hot Bath in Winter in	Diam.	Height.	Gas Supply.	Water Supply.	Prices complete with "Dual" Taps.
4	6 quarts.	20 mins.	30 mins.	8½ ins.	26 ins.	½-in.	½-in.	£5 17 6
3	2 gallons.	14 "	25 "	10 "	27 "	⅝ "	⅝ "	£8 5 0

10	16 "	—	—	26 "	60 "	—	—	£58 15 0

The quantity of gas required to warm water for a large bath by a "Lightning" Geyser of either size is from 15 to 20 cubic feet, which at 3/- per 1,000 feet costs about three farthings.

No. 850.

The "Champion" Geyser.

(Patent).

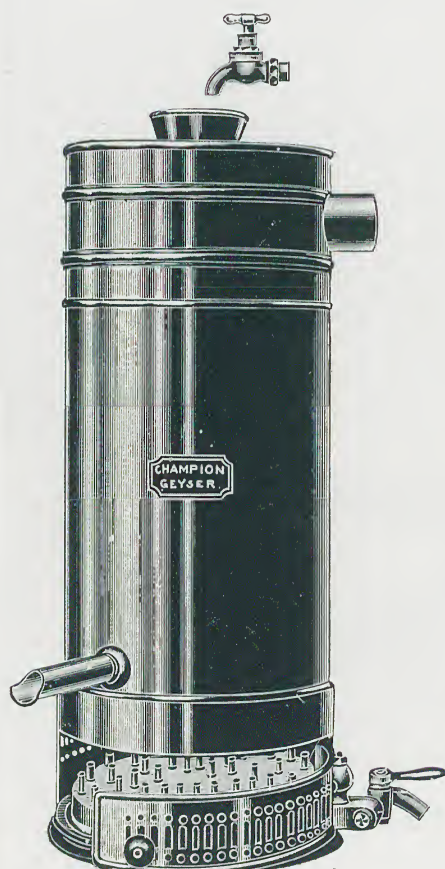

Made entirely of Stout Hardened Copper, with Swing-out Burner.

This Geyser is well adapted for obtaining the best results with the least initial cost, and smallest outlay afterwards either for Gas, Cleaning, or Repairs.

Although very moderate in price it is made of Stout Hardened Copper throughout, the inside Tinned, the outside Polished and Lacquered. The bottom, body, and top are all loosely fitted, and can be taken apart for cleaning, and put together again without skilled labour. The Spout and Gas Cock may be placed in any position, and the water supply drawn from any source not lower than the top of the Geyser.

This Geyser is not constructed to produce boiling water, and should not be used for a higher temperature than 160 degrees.

The water is not Sealed from contact with the Gas Fumes, as it is in the "Lightning," and therefore is not so well adapted for domestic purposes.

	Rate per minute.	Height.	Size.	Diam.	Weight.	Prices.
A	2 quarts raised 40 degrees.	21½ ins.		7½ ins.	14 lb.	£2 15 0
E	1 gallon do.	24 "		9 "	19 "	£3 11 6

O	3 " do.	32 "		12 "	35 "	£5 15 6
U	4 " do.	35 "		14 "	45 "	£7 8 6
X	8 " do.	48 "		20 "	150 "	£19 0 0
Z	16 " do.	60 "		30 "	275 "	£49 10 0

The above prices do not include the Cold Water Tap.

The A Size is adapted only for Lavatories; the E Size for Small Baths; the I and O Sizes are the best for Ordinary Baths.

Geyzers and Water Heaters.

No. 851.

The "Royal" Geyser.

PATENTED AND REGISTERED.

The whole of the Heater, except the burner, is made of hardened copper, the inside being coated with pure tin, the outside highly polished. The improved arrangement of the inside parts prevents choking, and the Geyser will work efficiently with either high or low water pressure.

The fixed burner makes it possible to produce the "Royal" at a very low price, in proportion to the quantity of water warmed.

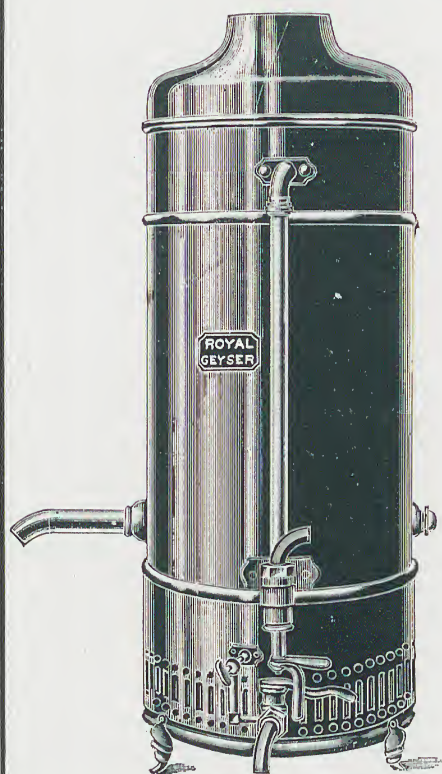

The heating is very rapid. A Hot Bath may be obtained in from eight to ten minutes, since the water flows through the apparatus, heated to average bath temperature, at the rate of **2½ to 3 Gallons per Minute.**

The Patent Locking Gear Taps prevent the gas being turned up, unless the Water Tap is turned on, nor can the Water Tap be shut off while the gas is alight.

The Spout can be fitted on either side.

Price—Complete with Double Outlet made of Stout Hardened Copper, Tinned inside, Bright Polished and Lacquered outside, **£4 11s. 0d.**

If without Patent Locking Gear Screw-down Water Cock of best make, as illustrated, **10/-** less.

No. 852.

The "Success" Oil Geyser.

The "**Success**" Oil Geyser heats as rapidly and as well as the best Gas Geysers. The Lamp Stove burns without wick, with a pure atmospheric gas flame, giving neither smoke nor smell.

The "Success" Oil Geyser is made in two patterns, known as "Success L," and "Success C."

The Oil should be Petroleum of good quality. The quantity required to warm a bath in ordinary weather is one pint.

"Success" Geyser Pattern "L."

In the "L" pattern the water flows through Copper chambers carefully tinned, and does not come in contact with the fumes.

It is thus delivered at the Spout quite pure and fit for drinking or cooking. The temperature may also be raised to boiling at a minute's notice, and this pattern is therefore useful for every domestic purpose as well as for baths.

Pattern "L."

No. 4 warms 1 Gallon per Minute,	£	s.	d.
boils 1 Pint per Minute ..	7	10	0
No. 3 warms 2 Gallons per Minute,			
boils 1 Quart per Minute ..	10	0	0
No. 2 warms 3 Gallons per Minute,			
boils 2 Quarts per Minute ..	12	12	0
No. 1 warms 4 Gallons per Minute,			
boils 3 Quarts per Minute ..	15	2	6

Prices include Cold Water Tap and Union.

"Success" Geyser Pattern "C."

In the "C" pattern the water is not secured from contact with fumes, and therefore is not suitable for drinking, but only for baths.

The Heating is very rapid, but this pattern is not intended to raise the temperature of the water above 160 degrees.

No water pressure needed.

Hard water will not fur it.

No. 24 warms 1 Gallon per Minute	£	s.	d.
to bath heat (say from 60° to 95°)	5	7	6
No. 23 warms 2 Gallons per Minute			
to bath heat (say from 60° to 95°)	7	0	0
No. 22 warms 3 Gallons per Minute			
to bath heat (say from 60° to 95°)	9	0	0
No. 21 warms 4 Gallons per Minute			
to bath heat (say from 60° to 95°)	10	15	0

Prices do NOT include cold water Tap.

Nos. 3 and 2 "L" and Nos. 23 and 22 "C" are the most useful sizes.

The "B" Pattern Califont.

HOT WATER INSTANTLY, NIGHT OR DAY IN ANY PART OF THE HOUSE.

The "B" Califont is tested to stand a pressure of 150 lb. to the square inch. The Valve opens and closes by the Water Pressure, and does not depend upon the action of any Weights or Springs. Made entirely of Stout Copper. Fitted with a Swing-out Burner. It supplies Hot Water to any part of the House and to any number of Taps without the trouble of maintaining a Kitchen Fire, and will supply Hot Water at any moment, at any temperature, without regard to the amount of Hot Water previously drawn from it.

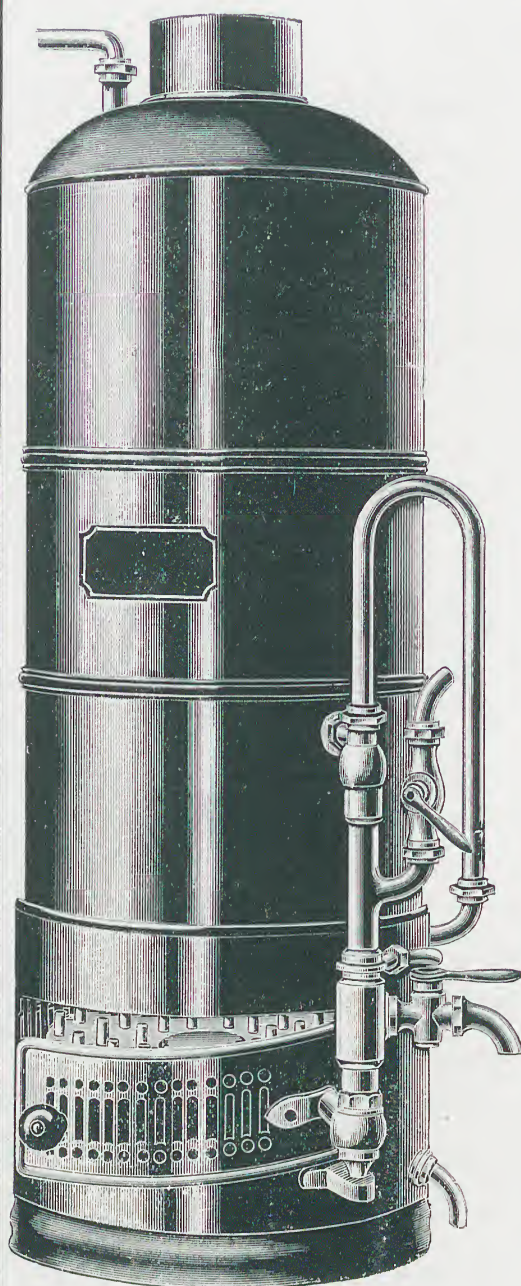

The "B" Califont instantly converts the Cold Supply into a Hot Water Supply. Hot Water can be obtained in a continuous stream upon opening any Hot Water Tap. On opening the Hot Water Tap the flow of water automatically admits Full Supply of Gas to the Burners, and Hot Water is immediately obtained. As soon as the Hot Water Tap is closed the Supply of Gas to Burners is immediately shut off, leaving only the Pilot Light or "Bye-pass," so that gas is only burning while Hot Water is flowing.

The "B" Califont may be fitted in any part of the House, but preferably in Basement or Cellar, where the Main Supplies of Gas and Water are most easily available. The Gas and Water Supplies are connected directly to the Califont. One Pipe only—the Hot Water Supply—is taken from the Califont and branched to any part of the House in the same manner as the ordinary Cold Supply Pipe.

The temperature of the Water flowing at the rates given below per minute is raised 40 degrees (Fahrenheit) above that of the Cold Supply, and the temperature may be increased or diminished according to size of stream.

Patent Instantaneous Water Heaters for Lavatories.

No. 854.

This Pattern is only 14 ins. wide, and 6 ins. high overall; small enough to be fixed behind any Lavatory without inconvenience. It will deliver one quart of water per minute, heated from 60° to 125° F. (scalding hot). It is free from drip or mess, and is also free from smell, unless worked with an excessive pressure of gas, and beyond its intended power; in this case the Tap should be turned down a little until the smell disappears.

Price 35/-

Nickel-plated 45/-

SPECIAL PATTERN for use with hard water. This pattern has the Water Tubes fitted with Plugs at both ends to allow for the entire Coil to be cleared inside from all deposits caused by hard or dirty water, 7/6 extra.

CAUTION.—All Geysers of whatever manufacture and however heated (the white flame is safer than the atmospheric burner) are unsafe without a ventilating pipe. Geysers must NEVER be fixed without a vent pipe connecting with chimney or outside of Bathroom.

The "Acme" Geyser.

PATENTED AND REGISTERED.

WITH PATENT SAFETY DUPLEX TAPS.

Boiling Water may be drawn within one minute of Gas being lighted and Hot Water immediately, and as the Water is heated in Sealed Chambers, without coming into contact with the Gas Fumes, it is quite fit for cooking or drinking. There is no danger of explosion from frost or from disordered or furred pipes. The Gas and Water Taps are interlocking and the Water and Gas are turned on or off together. The Burner is of the Bunsen type adapted for atmospheric or Blue Flame.

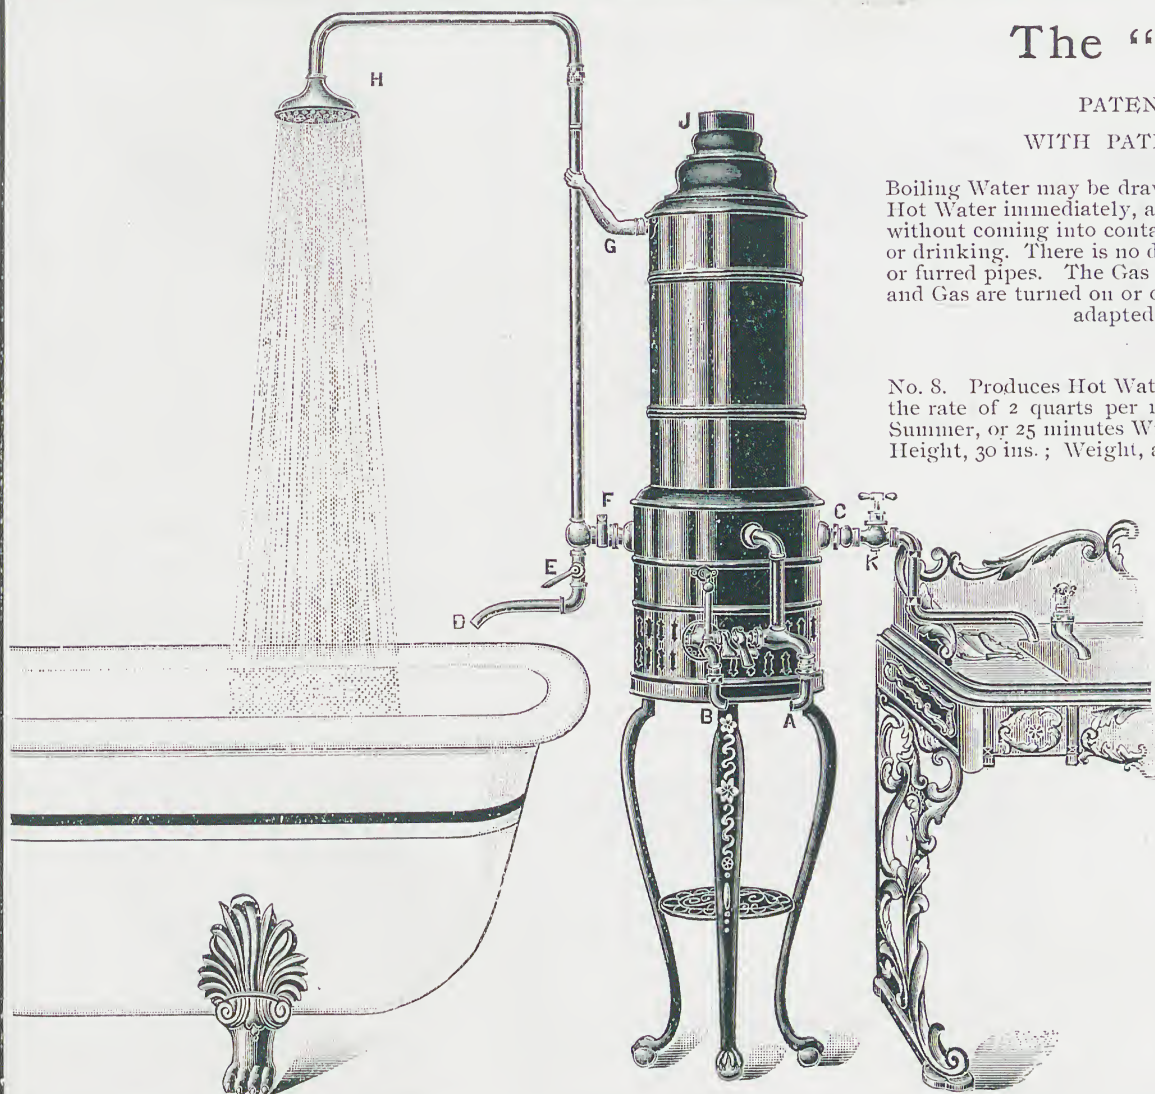

PRICES.

No. 8. Produces Hot Water at the rate of 2 Gallons, or Boiling Water at the rate of 2 quarts per minute. Hot Bath (5 ft. 3 ins.) in 14 minutes Summer, or 25 minutes Winter. Diameter, 9 ins. (not including fittings), Height, 30 ins.; Weight, about 40 lbs.; Gas supply, $\frac{3}{8}$ in. .. **155/-**

No. 5.	250 ft. 2 ins. pipe	13 ins.	16 ins.	210/-

Specially adapted for heating Coils, Hot Water Pipes, or Radiators in Halls, Conservatories, &c., and may be also used for any hot water circulation to Hot Baths, Lavatories, Towel Rails, &c.

These Boilers are made of stout hard copper, so do not rust and will wear well. The heating is rapid, and may be easily regulated. The burners are specially made of fire-clay, adapted for atmospheric flame. Each boiler is fitted with stand and brass connections for attaching to circulating pipes. The stock boilers are tested up to 10 lb. pressure per square inch, and will work safely with 16 ft. head of water. When greater pressure is required the boilers may be made stouter to order, at estimated prices.

"Flatback" Boiler.

No. 857.

For use in Bathrooms, Lavatories, Hairdressers' Shops, &c. The back is made flat so that the Heater may be conveniently fixed against wall and used where other kinds of Heaters are found difficult to fix.

The illustration shows Boiler arranged to fill by hand, but it can also be made self-filling and automatic.

Made of solid Copper, coated inside with pure Tin.

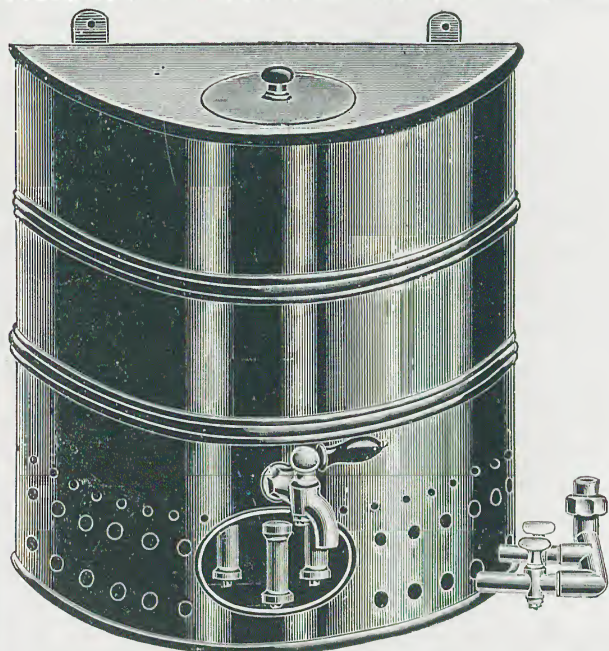

Arranged to fill by hand, complete with powerful burners and large draw-off tap:—

No. 1, holding 5 gallons of water	65/-

Patent Improved "Quick" Waste Lavatory Basin.

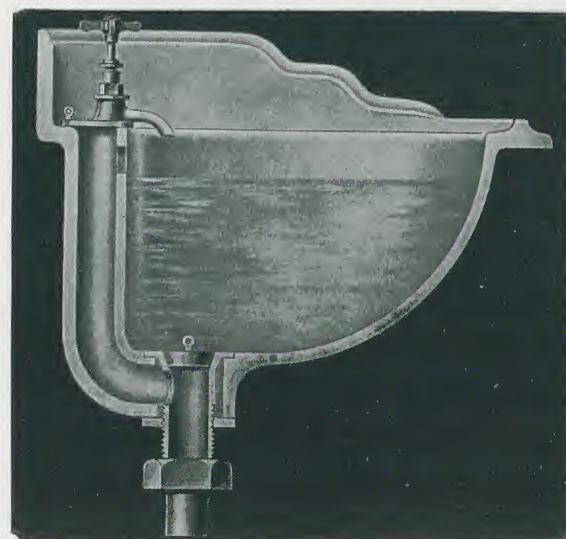

The Overflow is constructed in one piece with the Porcelain Basin, and is made accessible for cleansing by sliding aside the Cover, so that the foul and soapy substances which collect in ordinary Overflows may be easily removed. The Plumbing cost of Overflow is also saved.

Fittings consisting of ½-in. Pillar Taps, Hot and Cold; ½-in. Waste with Slot and Plug and Chain.

Brass, per set, 10/6 extra.

Nickel-plated, per set, 15/- extra.

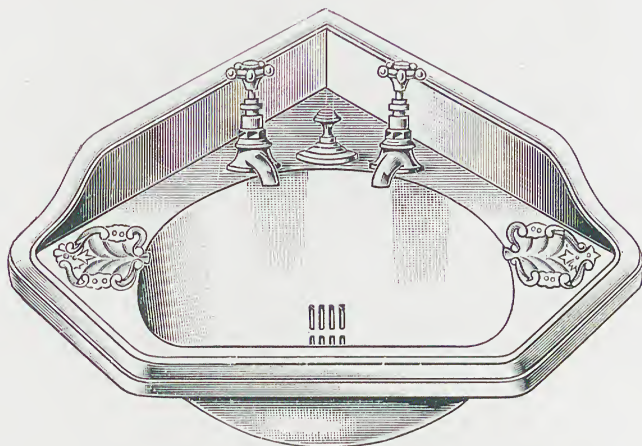

Section showing Cover aside for Cleansing Overflow.

Fullerton's Registered Full Flush LEAD CONNECTIONS for W.C. Pans.

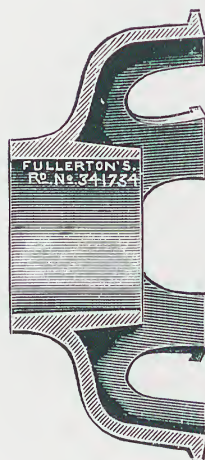

GRAND IMPROVEMENT!

NO RUBBER!

NO LEAKAGE!

LEAD SUBSTITUTE FOR RUBBER.

Clutch.

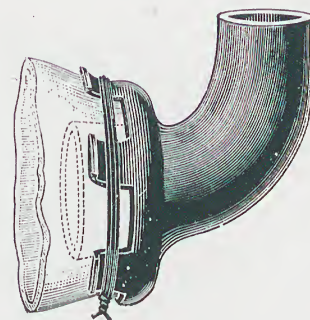

SECTION.

This is for converting old Supplies by connecting to the present Bends carrying the India-rubber Cones.

Price.—No. 8136.

1 1/4 in., 1 1/2 in.	Lead.	Brass.
	1/3	1/8

No. 8137. Connection.

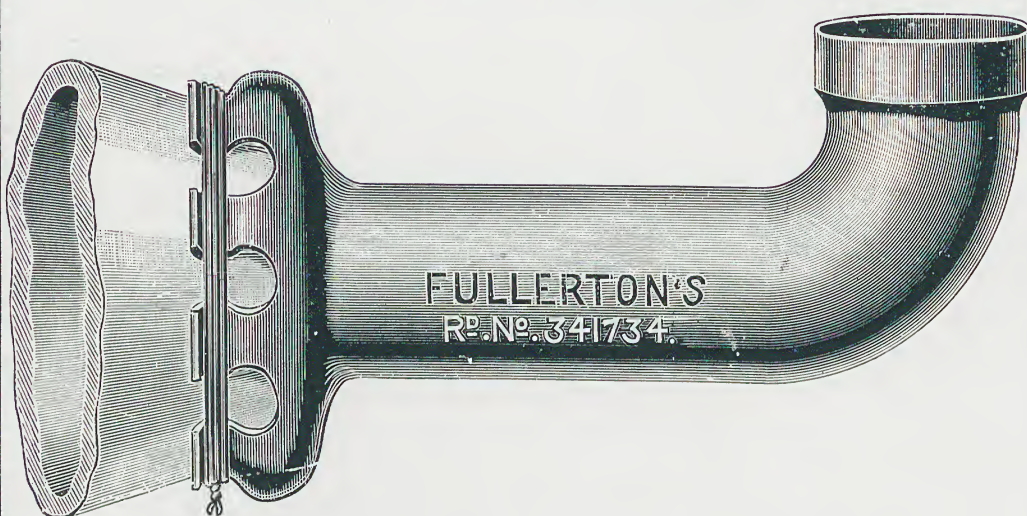

1 1/8 in. Inlet for inserting in 1 1/4 in. pipe.

To be fixed with a Wiped Joint to Supply Pipe, the other end to Nozzle of Pan with Red Lead and Copper Wire, as drawing.

No. 8137.

Price, 12/- per dozen.

Lead Long Arm Connectors.

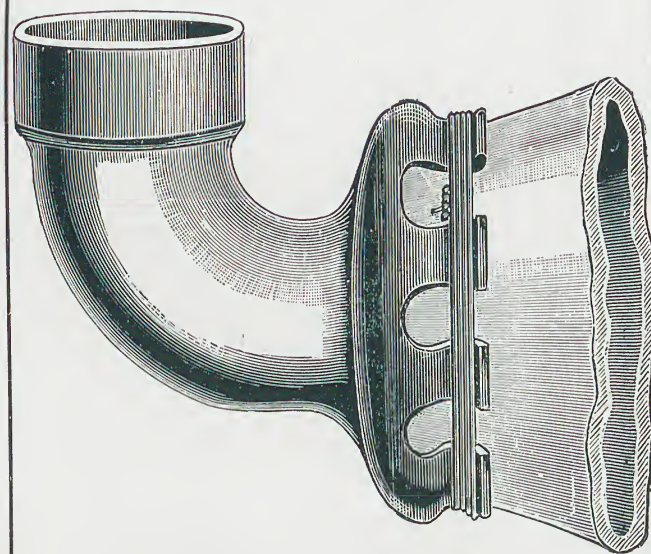

SHOWING CONNECTION FIXED TO W.C. INLET.

The above Connectors are used with Closets, the Traps of which project beyond the Pan, which often occurs in the case of an S Trap.

No. 8138.	Long Arm Connectors, 1 1/4 in. Supply	..	Lead.	Brass.
No. 8139.	„ „ 1 1/2 in. „	..	2/3	2/9 each.

Lead Short Arm Connectors.

SHOWING LEAD CONNECTOR FIXED TO W.C. INLET.

No. 8140.	Connector for 1 1/4 in. Supply	..	Lead.
No. 8141.	„ „ 1 1/2 in. „	..	1/6

These Connections are designed to supersede the India-rubber Cones, and when fixed make a Permanent, Sound and Effective Joint to the Inlet of the Closet Pan.

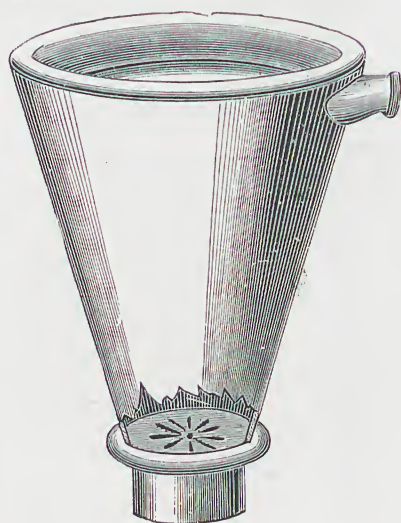

They are made in the following sizes:—For 1 1/2 in. Lead Pipe for Pedestal Closets; for 1 1/4 in. Lead Pipe for Closets (London County Council Pattern); for 1 1/4 in. Lead Pipe for Cottage Closets.

They present a full, free flush, are easily fixed, and leakage is impossible.

The mode of fixing the Bend Connections is as follows:—Coat the face of the Flange with Red Lead, place the Lugs over the bend of Pan Inlet, and press them down as shown above, and bind with Copper Wire, then connect the Outlet Pipe from Flush Cistern with Soldered Joint or Red Lead packing.

A Straight Connection is also made which may be fixed in the three following ways:—Solder the Connections on to the Lead Pipe and proceed as above; or place the connections over the Pipe, and dress the end of the Pipe out to the Flange; or coat the end of the Pipe with Red Lead, and place the Cone on, leaving the Pipe projecting one-eighth of an inch, expand mouth of the pipe with turn pin, and fix as above.

No. 8142. Slop Hopper.

Height, 16 ins. ; Diameter, 14½ ins. ; Outlet, 4½ ins.
Price, Cane and White, 4/9 White, 7/6 each.

Unless otherwise ordered the Closet will be sent complete with Turn Down S Trap.

CLAUGHTON'S

Patent "Adaptable Suspension" Wash Down Closet,

WITH SLOP TOP AND LEAD TRAP.

The joint or connection being under the water line, any defect is at once observed. Should the basin get broken it is easily disconnected and replaced at small cost. The trap or outgo can be turned round to any angle. Having a lead outlet, it ensures a perfect connection to soil pipe. The Basins having slop tops they can be used as urinals, slop sinks, &c. Basin and Trap are suspended from the floor, and thus underneath the closet can be kept clean. The Closet being entirely open all under and about it is lighted and ventilated, there are no dark corners where filth can accumulate unseen. The sliding device facilitates fixing and repairing. The Basin having a straight back and deep seal (2½ ins.), the faecal matter is at once submerged and deodorised.

Specification and Price, as shown.

Duckett's Patent Self-Cleansing Channel Gulley.

In ordering please state hand.
Drawing shows Right Hand.

DESCRIPTION.

These Gulleys measure 28 ins. \times 11 ins. \times 4½ ins. and are made of Amber Enamelled Stoneware. They have a Special Channel as shown, also an Inlet large enough to receive a 2 in. Earthenware Waste Pipe. Two Sloping Malleable Iron Grates are firmly hinged to it, ⅝ in. apart at the points. The Grates so fixed render the Trap accessible, and offer less resistance to the flow of the water than Grates set level.

The Trap is very small, holding only one pint of water and it can be turned in any direction to suit drain connection.

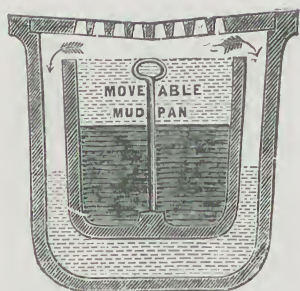

The Gulley is rendered self-cleansing by the following combination: viz. 1.—Reduced water space in Trap. 2.—Two Sloping Grates in lieu of one set level. 3.—The Special Channel.

Price. As per illustration, including Malleable Iron Hinged Grates, **16/6**

Extra if Grates are Galvanized, **1/6** per pair.

No. 8287.

Cartwright's Self-Cleansing Stench Trap.

The advantage claimed by the patentee of this Trap is the Moveable Mud Pan, as shown in sketch. This Moveable Pan is constructed so as to collect all dirt and mud passing through the Lid, and when full can be lifted out by the Loop, emptied and replaced, thus saving much time and the inconvenience of having to scoop out the dirt, as is the case with other Traps.

The Trap is strongly made of cast iron, with Hinged Lid, and is specially designed for Flushing; is also a convenient shape for building purposes. It never Fouls, is reliable in its action, and is a perfect and permanent seal against sewer gas.

	10/9	12/9	15/3	18/9 per doz.

No. 8437.—IMPROVED.

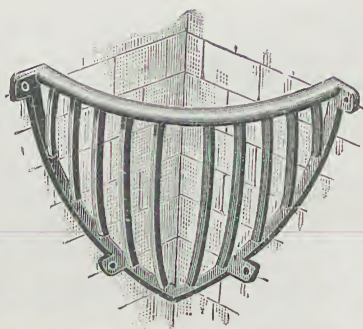

The Special Ball shown has the soldered joint round the top. In this position the seam is never immersed, and so is not subject to the action of the water, which, if it contains lime, will, with the ordinary round ball, in time, eat away the solder joining the two halves, when the water leaks in, and half filling the ball, prevents the valve shutting off properly, thus causing waste and annoyance.

	4	$4\frac{1}{2}$	$5\frac{1}{2}$	6 in. diam.
	14/3	16/6	18/6	23/6 per doz.

Patent Expanding Bolts.

No. 751.—Suitable for holding Hand-rails, Plummer Blocks, Brackets for Arc Lamps, Lanterns, Wall Rosettes, Sign Boards, Mirrors, Clocks, &c.

METHOD OF FIXING.—With the special boring tool make a hole in the wall of the size of the expanding bolt, and then after putting the bolt in position, screw up the nut tightly.

SUITABLE FOR FIXING MACHINERY TO FOUNDATIONS.

No. 751. Bolt.

Bolts made from $\frac{1}{4}$ in. diameter \times 1 $\frac{3}{4}$ in. long, to 1 in. diameter \times 8 ins. long.

PARTICULARS AND PRICES ON APPLICATION.

They do not require any cement, plaster, wooden plugs, or other material for holding them firmly in position.

"CLINCHER" Plug placed in hole made by Jumper, ready for driving home.

SOLID END TO RECEIVE
SCREW.

End view of plug ready to receive screw, etc.

Sectional view of plug fixed in wall.

"CLINCHER" Plug driven home and fixed, showing screw in position.

THE "CLINCHER" JUMPER.

THE "CLINCHER" PLUG is a wooden plug which differs from any other plug on the market, inasmuch that a solid end of its full diameter is presented to receive the screw or other fitting.

This result is obtained by having the wedge or cone fitted at that end of the plug which enters the wall. The end of the plug has four saw cuts ending in a groove so as to allow of the necessary spring without splitting.

When once the plug is driven home nothing can move it as the cone shaped wedge secures an even pressure all round the expanding end, and the screw or fitting being fixed into the solid end of the plug cannot come away without drawing the whole plug, which is of course impossible owing to its expanded end.

Specially suitable for

PICTURES, PLAQUES, ELECTRIC CASINGS,
BRACKETS, CUPBOARDS, ORNAMENTS,
&c. &c.

BEST SOLID MACHINE MADE BRASS BUTT HINGES.

Each Hinge is a duplicate of its fellow in length, breadth, thickness, and size of Joint; all seats may therefore be wrought to the same Gauge Lines.

The *Joint* is one solid piece with the Flap, and drilled through, thus giving the greatest strength possible; all bearings being accurately cut, even wear and steadiness of action are ensured.

Coach-house Door and Gate Hinges.

Collinge's Patent Spherical Hinges.

DRAWING SHOWS LEFT HAND HINGE.

Prong for
Stone.

These Hinges are fitted with a Ball-shaped Pin, and the Step or Hook has a cup for its reception. This Cup, besides forming a bearing for the Ball, furnishes a receptacle for Oil around it, and being covered by the Lip of the Knuckle, fitted with a Leathern Washer, dirt and grit, and even the oxydizing influence of air and moisture, are excluded. To maintain the durability of the Hinge, the Ball and Cup are formed with surfaces so hard as to be almost incapable of wear, or of grinding into each other, so as to cause the slightest stiffness of action.

No. 7180. Cast Iron, Best Quality.

Strap	18	21	24	27	30	33	36	39	42	45	48	51	54	57	60	66	72	78	84	90 ins. long.

Prices in Wrot Iron or Cast Steel sent on application.

Prongs for Stone, 1/- per pair extra.

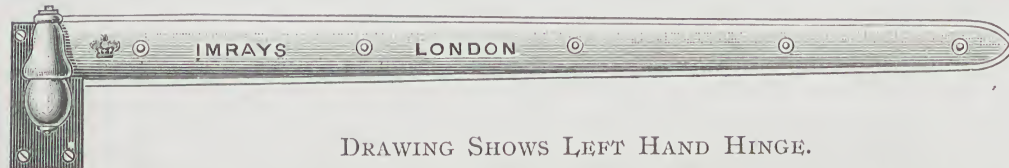

Bolts, 4d. each.

Spanners, 1/- each.

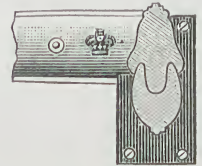

In ordering single or odd pairs of Hinges, the Hand should be stated according to illustration shown above.

Order should state whether to be hung to Wood Posts or to Stone or Brick Piers, also thickness of Gates, to determine length of bolts. Bolts and Nuts and Screws are always sent and charged extra.

Imray's Patent Cup and Ball Hinges.

DRAWING SHOWS LEFT HAND HINGE.

The Pins of these Hinges are made at one operation, solid with the Hinge, and as hard as the hardest steel, as also is the cup that receives it, thus rendering the joint incapable of wear and friction.

No. 7181. Cast Iron.

Fanlight Openers. Particulars required with Order, or for Quotation.

- 1—If wanted with Iron Fittings or all Brass.
- 2—How Fanlight is hinged—top or bottom, or on centres.
- 3—Width and height of Fanlight.
- 4—Width of Frame round Fanlight, top, bottom, and sides.
- 5—If Fanlight is recessed back from Frame, state how much.
- 6—If Frame is in reveal, give particulars.
- 7—State if Cord is to be on Right or Left side.

When Ordering Skylight Openers, the following Particulars should be given.

- 1—Width and height of Skylight.
- 2—Exact width between Linings.
- 3—Depth of Recess.
- 4—Which side Cord Wheel is to be fixed.
- 5—If wanted with Iron Fittings or all Brass.

THE "INVISIBLE" FANLIGHT OPENER.

The advantage of this invention will be appreciated by Builders, Architects and others, as being a Perfect Fanlight Opener, without the disadvantage of any unsightly part projecting into the room, to the impediment of blinds, etc. All the fixing required, is a $\frac{3}{8}$ in. diameter hole bored in the door frame $2\frac{3}{4}$ ins. deep, into which the screw works, and when the Fanlight is closed, the Opener is entirely out of sight.

For extra large or heavy Casements the side adjustment "A" is recommended, to work in conjunction with the Opener. It should be fixed about one third the radius of the Sash, measuring from the Hinge line. Fix the Plates square and level with each other, and it will then work with the greatest ease by means of the endless Cord.

It is equally suitable for Sashes hung at top, bottom, or on pivots.

No. 7769 For Heavy Lights, with Two Arms to each light .. 22/- 39/- 30/- 56/- 40/- 76/-

The above are priced with Vertical Rod up to 6 ft.; if required longer, 6d. per foot extra will be charged. The Horizontal Rod is calculated up to 3 ft. for each Light; if longer, 9d. per foot extra.

OPENERS FOR LANTERN LIGHTS.

Lights hinged at Top. Lights hung on centres.

No. 7770.

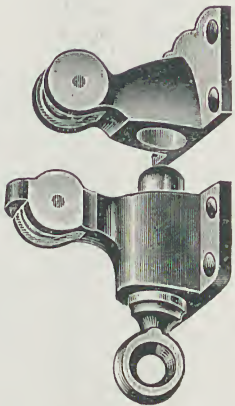

In ordering or asking quotation for these Openers, the following particulars should be given:—

- 1.—The number and size of lights.
- 2.—How Lights are hinged, top or bottom or on centres.
- 3.—If Lights are in recess, depth must be given.
- 4.—Length over all the Lights for horizontal bar.
- 5.—The measurements at A, B and C.

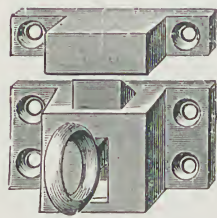

If there is any deviation from the engraving, a sketch of section of Wall and Ceiling, with measurements of each right up to the lights, should be given, and if there is a Centre Purline in Ceiling it should be given.

Estimates Given on Receipt of Full Particulars.

"HANDY" PATENT BLIND ROLLERS.

No. 7798.

1 in. Rollers in following lengths, with patent Grooved Roller, Galvanized Iron Rod and Grooved End Cap. Also Lath.

Lengths, 42 48 54 ins.

Prices—5/3 6/- 6/9 doz.

DESCRIPTION.

This Roller is made with an undercut groove in it extending the full length of the Roller, and which receives a Galvanized Iron Rod. In order to attach the Blind to the Roller, the rod is taken out of the groove (a slot in one end of the Roller readily allowing of this being done) and is inserted along the hem of the Blind.

All that is now required is to slide the rod, with the Blind on it, back along the groove in the Roller.

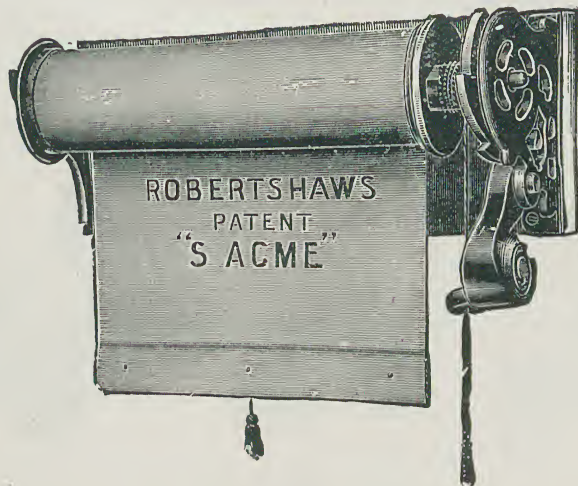

ADVANTAGES.

No tacks, tape, stitching or pinning required to attach the Blind to the Roller, and the whole operation completed in less than a minute.

The groove being parallel with the Roller, the Blind must always wind up straight. There is no necessity, in adopting the Roller, to purchase new Blinds, as those already in use can readily be adapted to it.

The Iron Rod being galvanized, cannot rust, so there is no possibility of damage to the Blind. The Rollers and Blinds will outlast those attached by the old-fashioned method, for in attaching and removing the Blind, no damage is done to either.

LEADED GLASS BLINDS.

No. 7876. Lead Lights similar to drawing, in French Polished Mahogany Frames, fitted with Bolts and Studs complete, 6/- per foot Super. Blinds under 4 ft. will be charged as 4 ft. Illustrations of other patterns on application or special drawings prepared. Any words can be inserted in patterns such as "Billiards," "Office," or the names of any trades, or shopkeeper.

NOTE.—When ordering Cane Blinds please give the Exact width between beads of Window Sash, also height required from bottom Rail of Blind to top Rail of Blind. The short overstanding horns at the bottom of Blinds are for the depth of bottom Sash of Window, so that the full pattern may be visible from the street. The centre of the ornamental cane top is from 4 to 6 ins. above top Rail and is taken as a portion of the Blind itself and charged accordingly. Blinds measuring less than 3 ft. Super will be charged as if containing 3 ft.

Extra Sizes, 4 in. for 1½ in. Doors, and 6 ins. for 2 in. Doors. No. 7939.

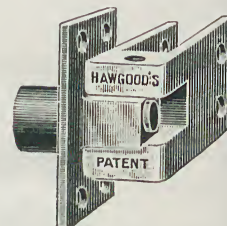

A pair of Double-action Hinges comprises a Spring Hinge (as above illustration) and a Double action Hinge, without Spring, constructed with a locking-up apparatus so that one flap only will open at a time.

The Spring Hinge should be fixed at the top of door; but where impracticable, it should be fixed in the centre with a Locking Hinge top and bottom. For very heavy doors, where there is much traffic, such as Railway Stations, it is advisable to put two Spring Hinges and a Locking Hinge.

HAWGOOD'S PATENT REVERSIBLE SPRING HINGES.

GUN-METAL.

No. 7940.	For doors up to 50 lb. weight (1 pair), Two Single Hinges ..	35/- pair.

 Buffers will render
 any door practically
 noiseless.

- Sample set of 3 .. **1/4**
 per dozen Cards. } **15/-**
 (3 Buffers on each card), }

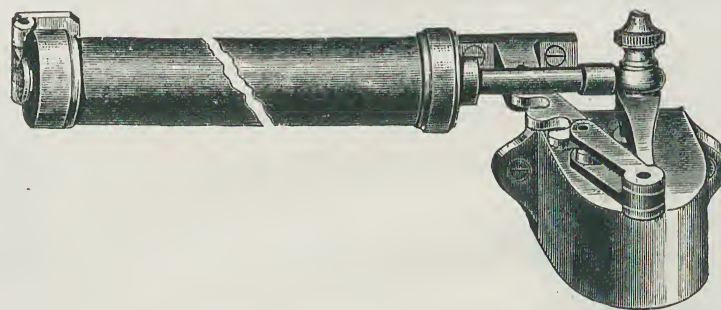

DOOR CHECKS AND SPRINGS.

THE "RELIANCE" DOOR CHECK.

To prevent Noise in Doors closed with Springs, &c.

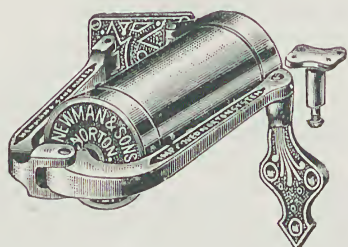

- No. 7982.** Suitable for light and medium doors,
 Japanned, with polished brass barrel .. **8/-** each.
 Nickel plated Do., do. .. **10/-** „
 „ **7983.** Suitable for heavy doors, Japanned,
 with polished brass barrel .. **10/-** „
 Nickel-plated Do., do. .. **12/-** „
 This Patent Check will effectually prevent any door from banging,
 whatever Door Spring may be used.
 Easily fixed on the closing side of doors of any thickness, either
 right or left hand.
NOTE.—This is a Door Check only, *Not* a Check and Spring.

THE "UNIVERSAL." ADJUSTABLE DOOR
CHECK AND SPRING.

- Both Check and Spring are adjustable to any strength, and will
 suit any size door.
 The application of the "Universal" for the purpose of closing
 doors is general.
 It will either Push or Pull a door, whether it be right
 hand or left hand.
 It can be thrown out of action by unhooking the lever arm.
 Working parts are so simple that they cannot possibly get out
 of order.
No. 7984. Check and Spring, Brass .. **12/6** each.
 „ **7985.** „ „ „ Larger, Brass .. **18/9** „

DOOR CHECKS AND SPRINGS.

THE "NORTON" CHECK AND SPRING.

- No. 7986.—For very Heavy Doors up to 4 ft. 0 ins. wide .. 30/- each.
 „ 7987.—For Heavy Doors „ 3 ft. 6 ins. „ .. 23/6 „
 „ 7988.—For Medium „ „ 2 ft. 8 ins. „ .. 20/- „
 „ 7989.—For Light „ „ 2 ft. 6 ins. „ .. 16/- „

These articles are all made in Malleable Iron, Nickel-plated, and sent out with Screws, and directions for fixing.

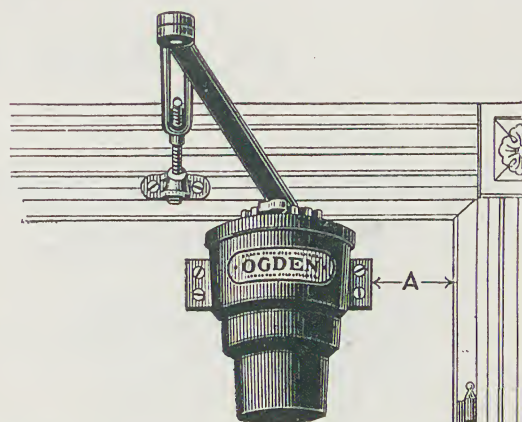

Also made with PATENT REGULATOR to close Doors with Stubborn Lock Bolts.

- No. 7990.—For very Heavy Doors up to 4 ft. 0 ins. wide .. 36/- each.
 „ 7991.—For Heavy Doors „ 3 ft. 6 ins. „ .. 29/- „
 „ 7992.—For Medium „ „ 2 ft. 1 in. „ .. 25/- „

THE "OGDEN"

LIQUID DOOR

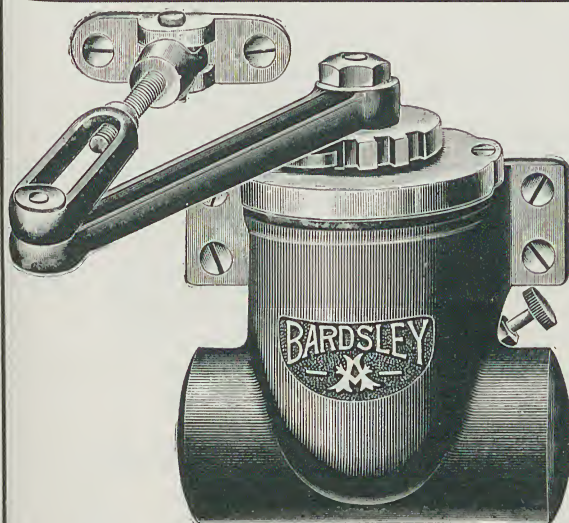

CHECK AND SPRING.

Left Hand Check on Left Hand Door. Inside, Door opens 15 ins. beyond a right angle.

These Checks are reversible for Right or Left Hand Doors.

- No. 7993.—For Screen Doors only .. 12/3 each.
 „ 7994.—For Light Inside Doors under 7 ft. high, 2 ft. 6 ins. wide .. 16/6 „
 „ 7995.—For Heavy Inside Doors under 7 ft. high, 2 ft. 9 ins. wide .. 20/6 „
 „ 7996.—For Vestibule and Light Outside Doors under 7 ft. high, 2 ft. 4 ins. wide .. 24/9 „
 „ 7997.—For Extra Heavy Inside Doors, such as corridor and office doors .. 32/9 „
 „ 7998.—For Outside Doors under 7 ft. 6 ins. high, 3 ft. 6 ins. wide .. 41/- „
 „ 7999.—For Doors under 8 ft 6 ins. high, 4 ft. wide .. 41/- „

THE "BARDSLEY" OIL DOOR CHECK AND SPRING.

Freedom from packing friction. It is the only Door Check made without packing in its working parts. The Spring cannot be used the wrong way up, and thus get bent out of shape, and perhaps broken, a frequent occurrence heretofore. If such an attempt is made the engaging parts will slip by each other harmlessly. Another source of annoyance has been the breaking of springs, the breaks almost invariably occurring near the inner diameter where the coils are small. In these springs the inner diameter has been enlarged so as to dispense with the small inner coils.

A lighter, longer, and more elastic spring is used, giving greater durability. This is permitted by the greater movement given by the larger internal diameter.

The checking power cannot be lost through the liquid being forced from the liquid chamber, as the two are connected by openings.

A reserve oil chamber is provided between the spring chamber and checking cylinder, holding a supply of oil sufficient to last for many years.

More oil can be added when needed, through the screw hole in the cap, without removing the Check from the door.

It has a releasing device, by means of which the checking power is removed when the door is nearly closed, the spring thus exerting its full force to latch the door. This feature is brought into play by an adjustment of the arms, and if not desired need not be used.

The new adjustable arm will be found very convenient for above purpose, and also for detaching in summer if door is required to stand open.

It may be readily taken entirely apart; after removing the arm it is only necessary to take out three screws. This is an important feature if repairs are needed; a broken or worn part may be procured and put in by any one, instead of the expense and delay of sending the Check to the factory for repairs.

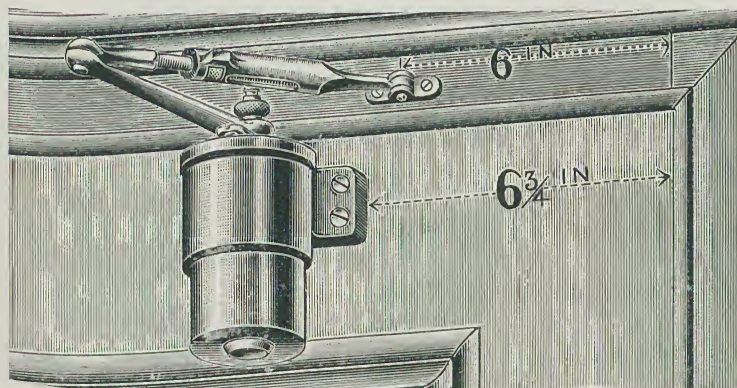

The construction is simple and strong. The bearings are long, and the spindle with crank at lower end is drop forged from cold rolled steel.

The spring tension is applied by means of the ratchet wheel on top; the checking power is controlled by the thumb screw at the right. A wrench, bottle of oil, and directions to apply, are packed with each Door Check, in a wooden box.

Nos.	FINISHES	Gold Bronze.	Nickel-plated.	Antique Copper or Polished Bronze.
61.—For Light Inside Doors not over 2 ft. 9 ins wide	19/3	.. 30/-	.. 32/- each.
62.—For Narrow Vestibule Doors or Inside Doors not over 3 ft. wide	22/-	.. 32/9	.. 34/9 „
63.—For Outside Doors not over 2 ft. 9 ins. wide	28/-	.. 40/9	.. 41/3 „
64.—For Outside Doors not over 3 ft. 3 ins wide	33/3	.. 46/-	.. 46/9 „
65.—For Extra Large and Heavy Doors	38/9	.. 52/9	.. 55/- „

The above table gives the capacity of the Door Checks under ordinary conditions; if a door is subject to severe usage, or is exposed to wind or strong draughts, a Check of sufficient capacity should be used.

THE "MONARCH" OIL CHECK AND SPRING.

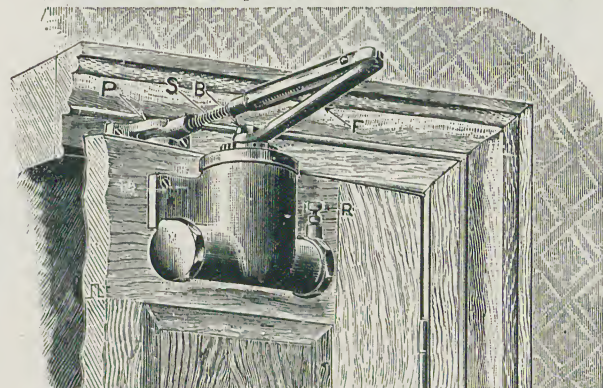

Engraving shows the Check fixed on door on the hinge side of the door. Looking at a door from INSIDE THE ROOM, whichever hand the HINGES ARE ON is the hand of the door, and requires a Check the same hand.

- No. 66. For Light and Medium Doors .. 28/- each
 „ 67. For Heavy Doors .. 39/- „

The force of the Spring can be easily and instantaneously adjusted, and the Check can be regulated as desired.

THE "BLOUNT" CHECK AND SPRING.

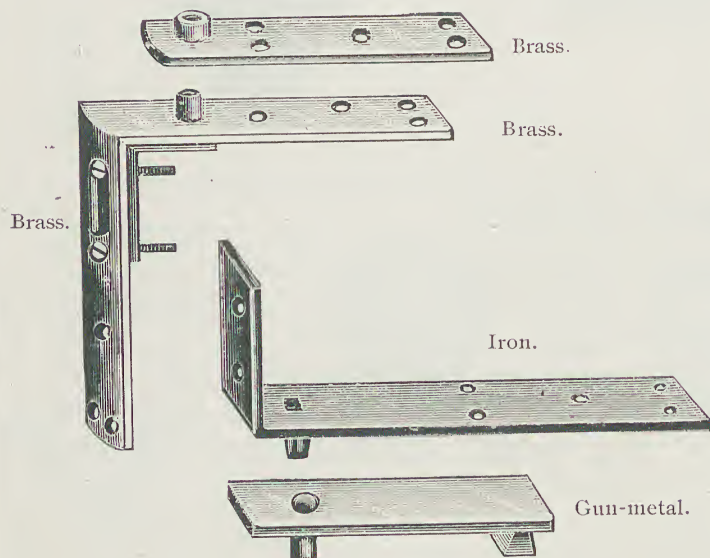

This is a Right Hand Check. When ordering please state which hand is required.

No.	Finish.	Gold Finish.	Artistic Bronze, Copper or Steel.
68.—Suitable for Screen Doors	22/- each.	.. 2/- extra.
69. „ Light „	25/9	.. 2/9 „
70. „ Ordinary „	31/3	.. 3/6 „
71. „ Heavy „	37/6	.. 4/- „
72. „ Extra Heavy Doors	50/-	.. 5/6 „

Can be painted to match surrounding woodwork. To change the hand, turn over the Internal Spring and keep the arrow marks together.

DOUBLE ACTION FLOOR SPRINGS

When Ordering Single Action state Hand of Door.							

THE "CENTURY" COMPRESSION FLOOR SPRING.

No. 642. For Light and Medium Doors.	Complete with Top Centre and Brass Shoe and Regulating Key.
Plate, 9×5 ins. Box, 8½×4½ ins. 1½ to 2 in. Doors. ..	27/- each.
No. 643. For Heavy Doors.	
Plate, 10½×6½ ins. Box, 10½×5½ ins. 2 to 2½ in. Doors ..	42/-
The special feature of this Floor Spring is that it can be regulated to suit the weight or pressure of any door by adjusting the Capstan at end of box, which either releases or compresses the steel spring according to strength required. To strengthen the spring, turn Capstan to the right. To weaken, turn to the left.	

HILL AND WILLIAMS' PATENT.

No. 644. Without Adjustable Screw.

2 in. Shoe and under	38/6 each.
2½ " " " " " " " " " "	40/-
2½ " " " " " " " " " "	41/-
2½ " " " " " " " " " "	42/-
2½ " " " " " " " " " "	43/6

No. 645. With Adjustable Screw.

2 in. Shoe and under	42/- each.
2½ " " " " " " " " " "	43/6
2½ " " " " " " " " " "	45/6
2½ " " " " " " " " " "	46/-
2½ " " " " " " " " " "	47/-

Being fitted with an adjusting Screw "A," by turning the head of Screw (which is easily done by removing the Cover Plate) to right or left, the door will be aligned or adjusted, thus saving much time and trouble.

SHOP SHUTTER SHOES AND FASTENERS.

MALLEABLE IRON, WITH BRASS PIVOTS.

F

B

A

D

C

The illustrations show the Shoes required for a window where the Shutters are put up beginning at the RIGHT hand looking from the street. For the first, or right-hand Shutter, use the Shoes A and D, with a Brass Pivot; for the second and intermediate Shutters, use C and D; and for the last Shutter use E and B.

If the Shutters are put up from LEFT to right, use the same kind of Shoes the reverse hand.

Where the Shutters are put up partly from the RIGHT and partly from the LEFT hand, finishing in the middle, use the Shoes as above described RIGHT and LEFT, and for the middle or last Shutter use E and F, and in that case the Shoe B will not be required. In every instance, a Brass Pivot is required for all the Shutters except the last, which is fastened with a Bolt and Nut.

When sent out, the packages of Shoes are marked as follows:—Shoes A and B, in one package, marked "Plain Right" or "Plain Left;" C and D are marked "Right Rabbeted" and "Left Rabbeted;" and E and F are marked "Lasts."

"COUNTY COUNCILS" LOCKING LATCH.

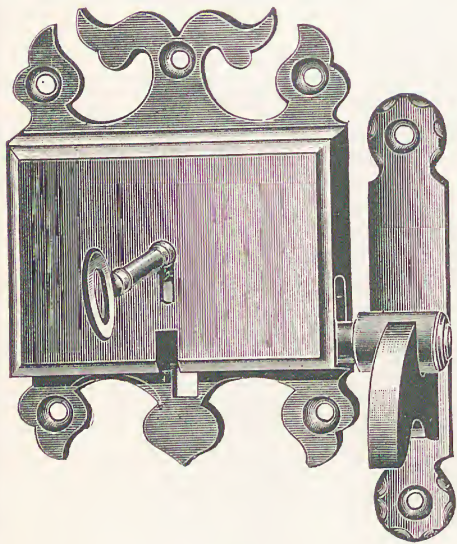

Fig. 2.

No. 696. Complete as drawn 4/- per set.
Made right and left hands

Fig. 1 shows the design of the Handle, the plate of which is about 11 ins. long x 2 ins. wide. The Handle is cranked, and a brass escutcheon is fitted over the keyhole.

Fig. 2 illustrates the Lock Case and Latch Fall. The Case is 3½ ins. x 2½ ins., without the fancy portion. The Latch Fall is fitted with a Roller, which, immediately it strikes the Catch on the door post, rolls smoothly into position without any friction whatever. The Latch can be locked down from either side, and is well adapted for panelled doors, shop doors, sea-side glass doors beyond the front door, and general estate and cottage work.

The iron portions are finished Art Black, and the brass parts polished.

The image displays three technical drawings of a door handle. The central drawing is a side view showing the handle's profile, which is curved and attached to a vertical plate. To the left is a front view showing the handle's face, which has a rectangular cutout. To the right is a back view showing the handle's reverse side, which has a rectangular cutout and four circular mounting holes.

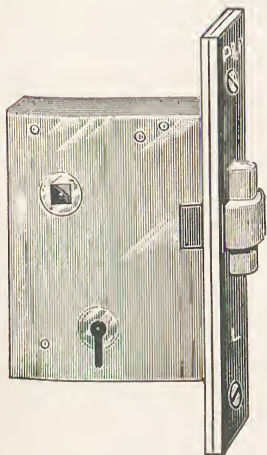

No. 6109. Berlin Black.
Swing Catch or Stop Catch.
Latches $6\frac{1}{2}$ $7\frac{1}{2}$ in.

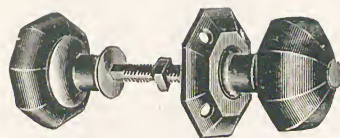

A detailed technical drawing of a mechanical latch or lock mechanism. The drawing shows a handle on the left, connected to a bolt. The bolt is shown in a retracted position, passing through a locking assembly on the right. The locking assembly includes a bolt head with a keyhole and a locking mechanism. The drawing is a cross-section, showing the internal components and the path of the bolt. The handle has a curved, ergonomic shape. The bolt is cylindrical with a flared head. The locking assembly consists of a rectangular body with a circular opening for the bolt head and a smaller circular opening for the keyhole. The bolt is shown in a retracted position, with its head inside the locking assembly. The drawing is a technical illustration, likely for a patent or a technical manual.

Well Finished, 50/- per doz.

A detailed illustration of a mechanical device, likely a lock or latch. It features a cylindrical body with a handle on the left and a mounting bracket on the right. The handle has a circular knob with a decorative pattern. The mounting bracket is rectangular with four screws. The device is shown in a side view, highlighting its mechanical components and the way it is mounted.

PANIC BOLTS.—IRON, BRASS AND GUN-METAL.

A.—Bolt Secured. B.—Bolt Withdrawn.
INSIDE VIEW.

BRIGGS' PATENT AUTOMATIC PANIC BOLT.

Locking in an Audience impossible.

The most efficient Bolt in the market; its construction is simple and massive, and it cannot get out of order.

For securing doors of Theatres, Halls, Factories and Public Buildings generally, rendering jamming, in case of panic, impossible.

Doors fitted with this apparatus when closed are absolutely secure from unauthorised entry; at the same time pressure from the inside instantly releases them. No Knob to turn or any other Fittings necessary.

Suitable for any class of Door, swing or folding, single or double.

Approved by the London County Council and other Public Authorities.

By a novel device, any attempt to open the door from without by shaking, &c., causes the Bolt to shoot further into the Sockets; at the same time, the Bolt Rod Ends are so constructed that they fit the Sockets perfectly, and prevent any rattling in stormy weather; this arrangement also allows the Bolts to enter the Sockets freely, even if the Door be warped.

	Malleable Iron.	Polished Brass, with Gun-metal wearing parts.
No. 6215. For Single Doors, <i>i.e.</i> , One Bolt and One Cross Arm	47/-	62/6 each.
„ 6216. For Pair Rebated Doors, <i>i.e.</i> , One Bolt and Two Cross Arms	57/6	77/- per set.
„ 6217. For Pair Swing Doors, <i>i.e.</i> , One Bolt and Cross Arm to each leaf	94/-	125/- per pair.
„ 6212. Patent Dust Excluding Sockets supplied with this Bolt at 3/3 each extra. See page 422.		

Sizes required are shown by dotted lines on drawing.

FOR SWING DOORS.

IMPROVED PATENT AUTOMATIC PANIC

“EXODUS” BOLTS.—(L.C.C.)

For the Exit Doors of Theatres, Music Halls, Factories, Mission and Assembly Halls, Churches, &c.

Facilitates the safe exodus of a body of people by Simple Contact with the Push Rails.

The “Exodus” Patent Bolts fully comply with the regulations of the L.C.C.

The Doors are instantly freed by means of the Push Rails.

The “Exodus” Patent Bolts are also made with Keys to open from the outside.

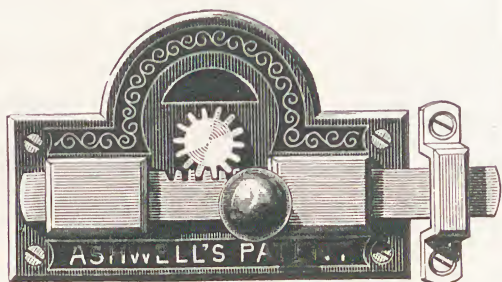

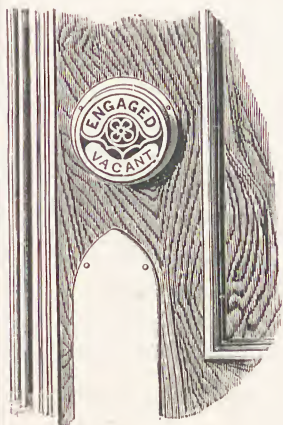

The “Exodus” Patent Bolts are recommended for Durability, Strength, and Efficient Action.

Are easiest to fix, requiring no cutting of Doors.

Have a Superior Finish and give the Highest Value for Quality, Style and Price.
